

UNUSUALLY ATTRACTIVE YEAR-ROUND HOME OR RETREAT

The Haidi Hide To Be Modeled at annual Seattle Home Show

Hi! Ho! Haidi Hide

A full-size model of a new, unusually attractive year-round home, especially suitable for that vacation retreat, will be a feature of the Mobile Homes and Outdoor Living Section at the 22d annual Seattle Home Show, February 19-27, at the Center Coliseum.

It is the Haidi Hide, to be presented by Haida Hide, Inc., of Edmonds.

It is designed by Einar Svensson, international structural and civil engineer, who has given particular attention to its method of construction and the availability of its standard components.

CHARACTERIZED by its large cedar shaked roof, with

overhanging, outward-inclined sidewalls, it fits into any type of setting, with floor plans worked out to provide an exceptional feeling of spaciousness.

The living room has a high, open ceiling and a front crystal glass wall with sliding glass door which provides maximum light and brings in the outdoor scenery. Additional light is provided through sliding windows with screens and special skylights arranged at eye-level.

An easily accessible and safe stairway leads to the loft, which is approximately one-half of the main floor area and has full standing height in the center, with light provided by a glass end

wall with two sliding windows.

Another feature is a large sundeck, partially covered overhead, with a specially designed seating arrangement along the three outer railings.

Meanwhile, preparations are well along for the main show area's model home, being designed by the architectural firm of Anderson and Bell, with furnishings and decorations by Ken Schoenfeld Furniture of Auburn and Bellevue, and landscape design and installation by Malmo Nursery.

The Home Show is sponsored by The Post-Intelligencer and Home Builders Association of Greater Seattle.
