Economy Engineering

Applied to

Small Home Planning

LESS WASTE

LESS LABOR

LESS TIME

Economy homes provide all the essentials for good living at low cost. In the construction of any home a considerable saving is effected by planning dimensions that permit the use of standard sizes of lumber and other building materials. The simple square and rectangular floor plan is also an important factor in reducing building costs. The homes in this book were all designed in accordance with these most important considerations and the result is a pleasing selection of beautiful, livable, modern homes . . . surprisingly reasonable in cost.

Many of the smaller homes shown on the following pages are designed as minimum living units and the simplicity of the plan lends itself to owner completion, or possibly being entirely built by the owner. The interior walls are designed for the use of standard four foot width sheets, which are available in materials such as plywood, wall or insulation board and many others. The windows, doors and millwork sizes coincide with the stock sizes of the manufacturer and the actual building of these homes may be accomplished by following standard, well known, construction procedure.

Come in and discuss your home building requirements with us. We shall consider it a privilege to be of any possible assistance and, of course, there is no obligation.

DESIGN A

★ NOTE THAT TWO EXTERIORS ARE ILLUSTRATED. WHEN ORDERING PLANS SPECIFY WHETHER DESIGN A OR B IS WANTED. DESIGN A HAS FRONT PORCH.

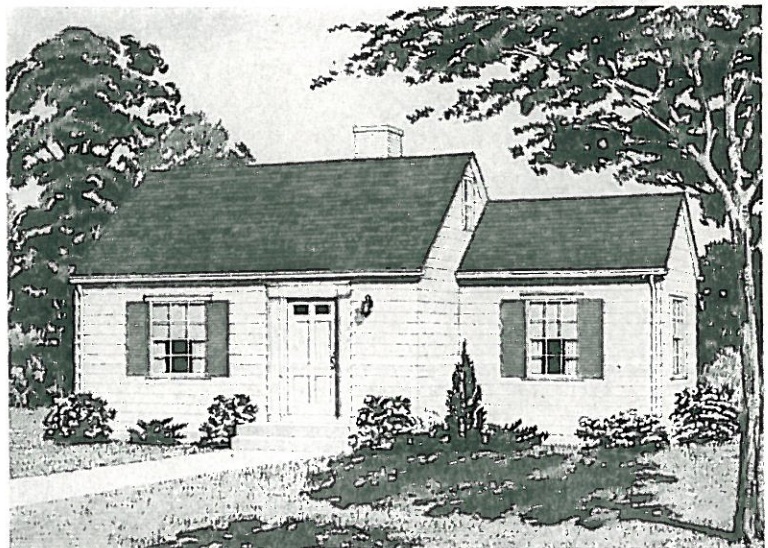

THE PEDMAN

A cozy three room home, planned with a stair to attic for future use of the second floor for additional room. A full basement is also provided. The modular units indicated on the plan as on other plans in this series, are four feet square. Note the symmetry of window and door locations with reference to these squares.

THE POWERS

A Two-Story Home

The "Powers" affords a compact arrangement for a low-cost two-story home, in which the bath is located on the first floor adjacent to the kitchen plumbing to hold down cost. The second floor rear dormer provides cross ventilation for both bed rooms.

★ 12,315 CUBIC FEET

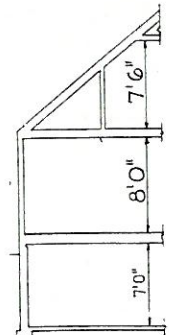

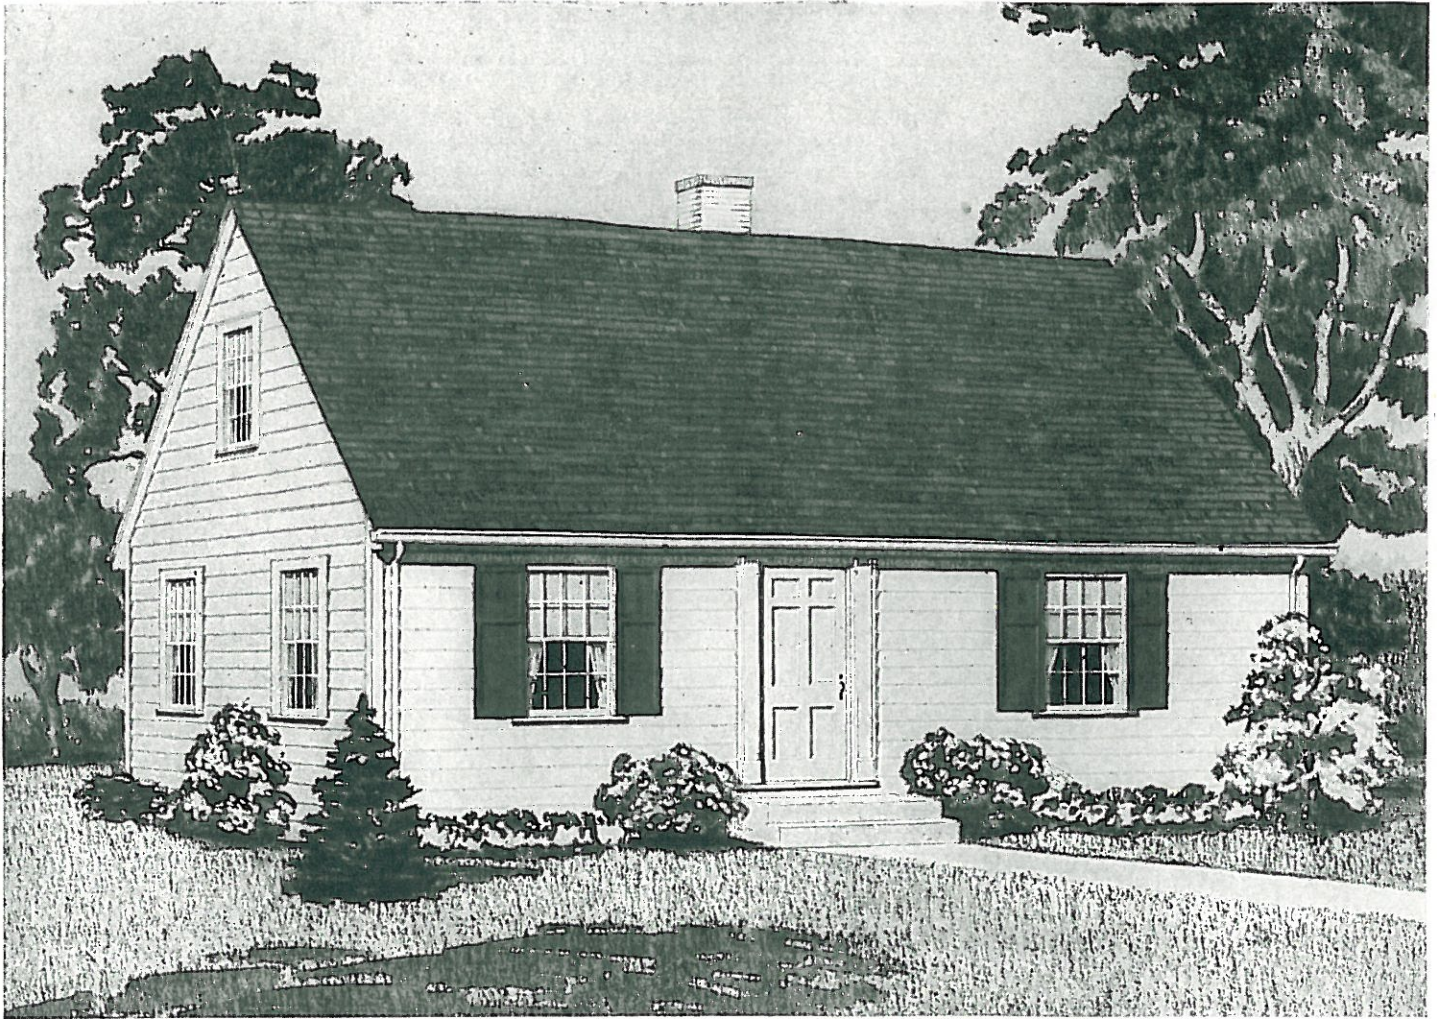

THE PREVOR

Although this home has four large rooms, including two bed rooms, it really has the efficiency of five, for ample dining space has been provided in the kitchen. The compact rectangular plan assures a maximum use of space. A full basement and attic stair are provided.

This plan offers opportunity for 2 future rooms in attic.

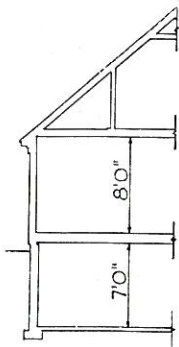

CUBAGE
15,170
CUBIC FEET

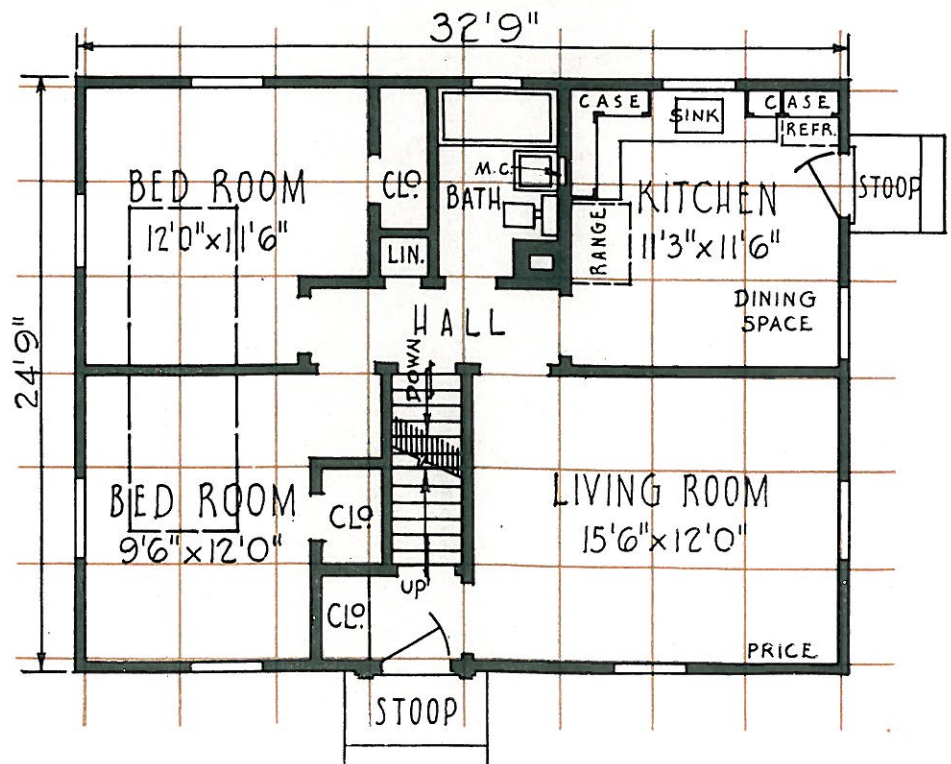

THE PRICE

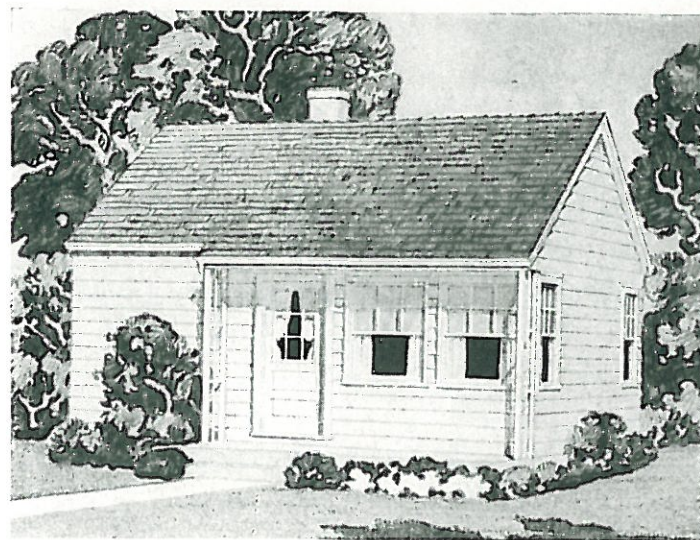

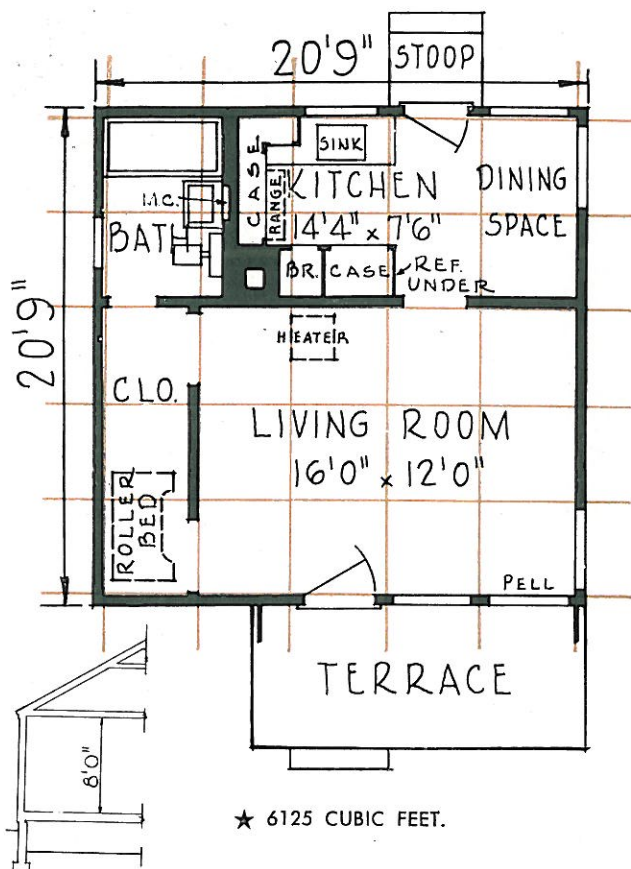

A practical home of four rooms with five-room efficiency. Note that easy access is had to all rooms from the connecting center hall.

CUBAGE

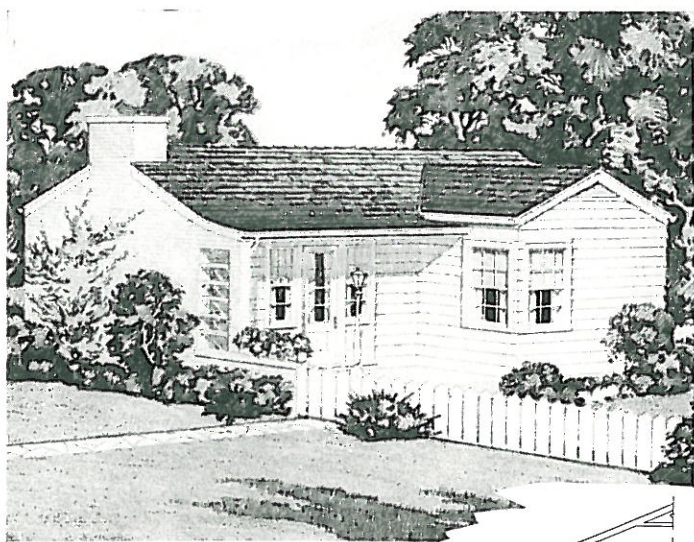

17,415 CUBIC FEET

THE PELL

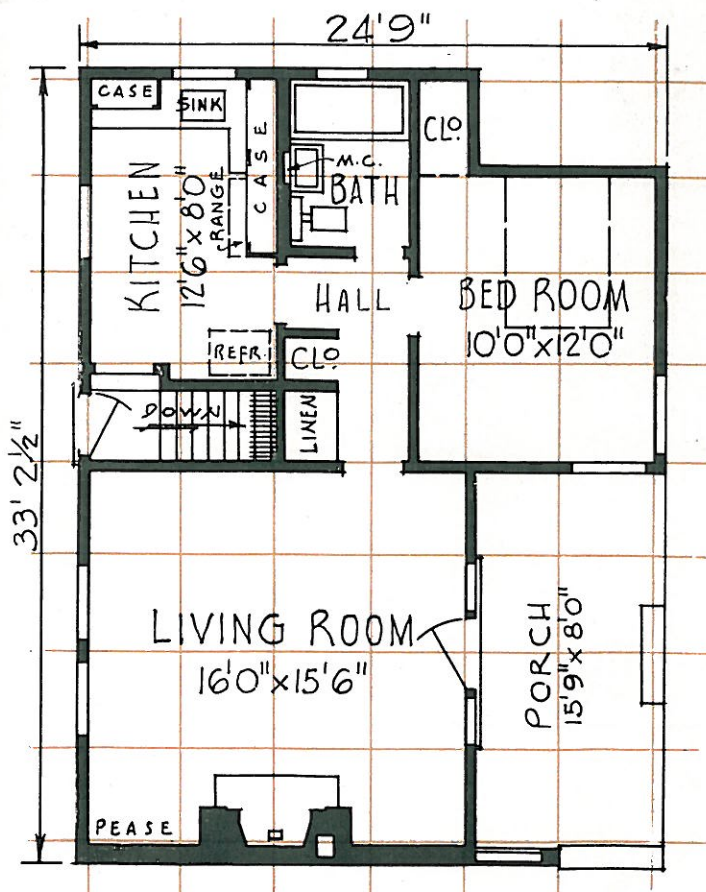

This simple, low-cost home is a complete living unit designed to occupy no more space than an average two-car garage. It is an answer to the housing need for those with limited building funds.

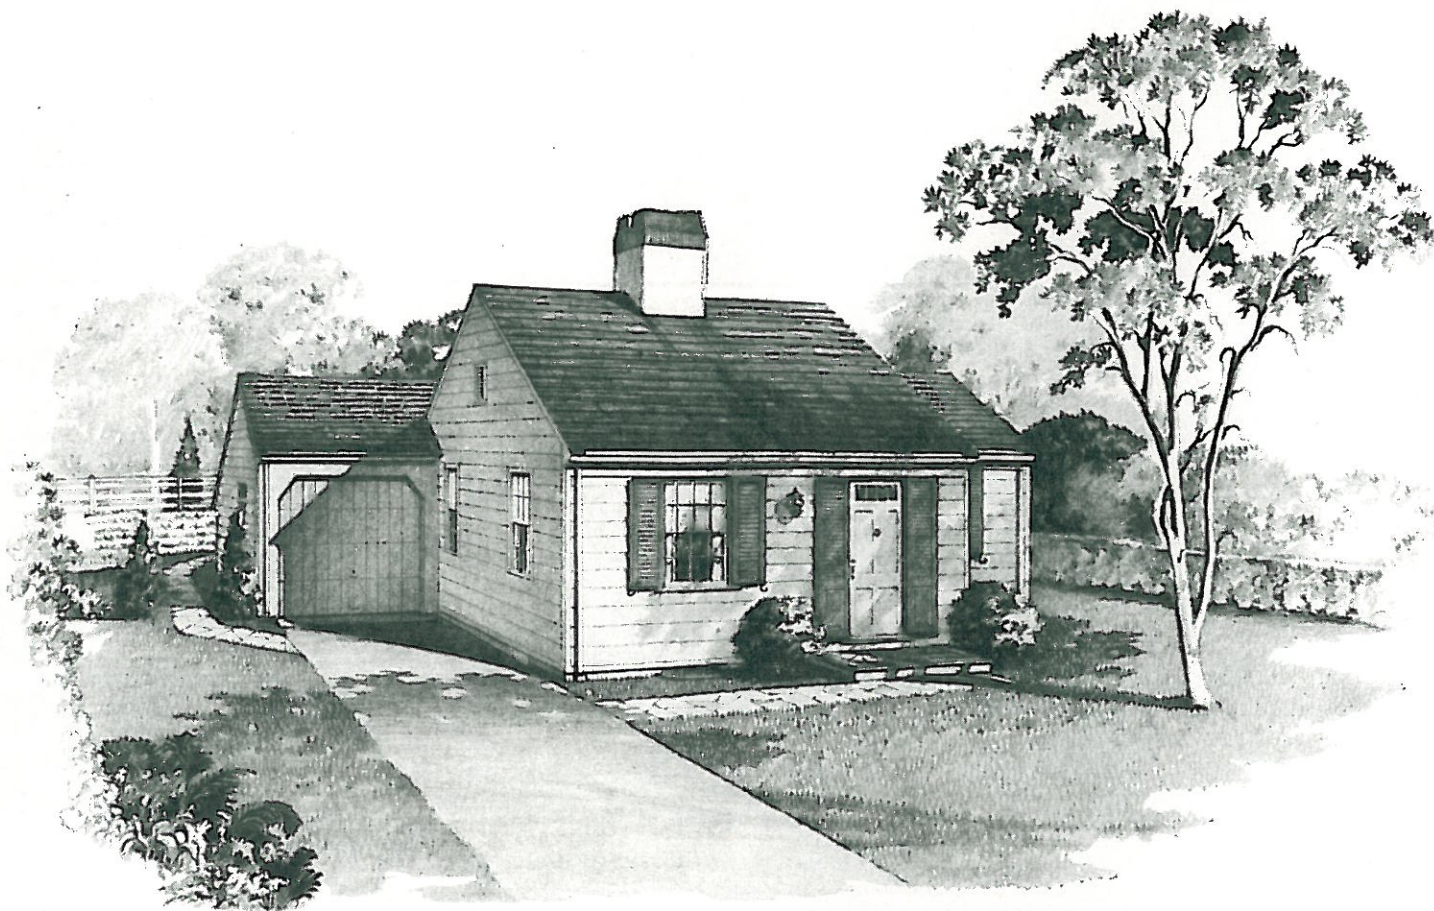

★ 8345 CUBIC FEET

THE PEASE

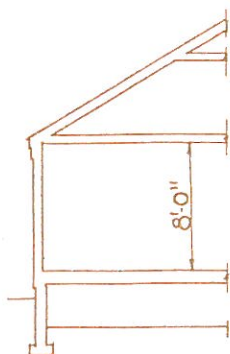

Seldom is found a combination of exterior beauty and an ideal floor plan that has more than this pleasing home. Here is proof of the contention that small homes, too, can be produced in good architectural taste.

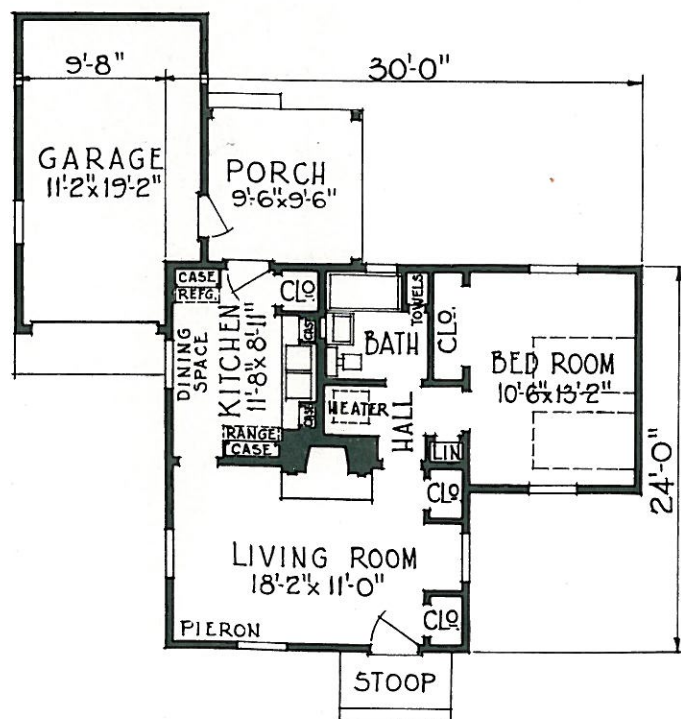

THE PIERON

This unusually attractive home with its centrally located fireplace is compactly designed to utilize all available space to best advantage. The dining space in the kitchen, the large bedroom accommodating twin beds, and the many closets and storage cabinets are other features worthy of your consideration. The large porch at the rear affords protection in passage from the kitchen to the attached garage and it may be screened or glazed and used for dining or as a play room.

CUBIC FEET
★

THE PHILO

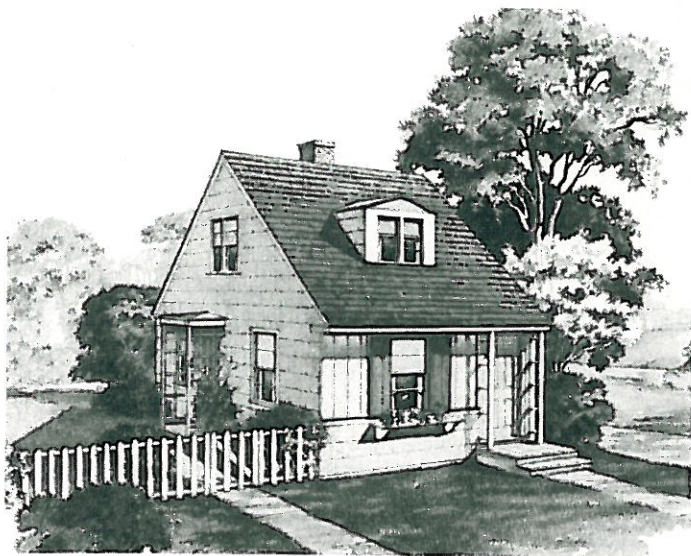

This unique home design with its overhanging roof is suitable for construction on a very narrow lot. Two bedrooms may be added at the left at a later date if so desired. See the Palsen, Page 1.

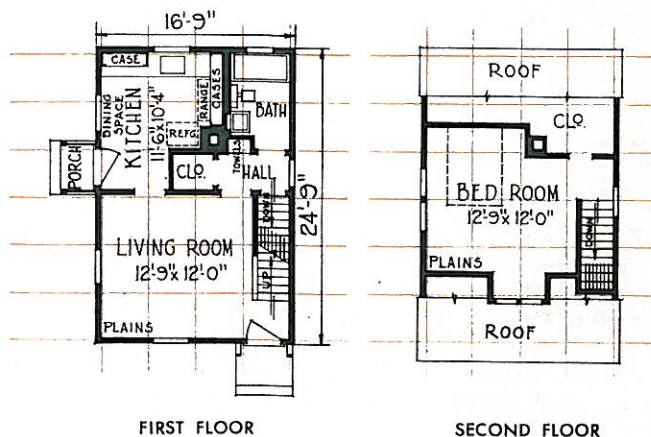

★ 10,857 CUBIC FEET

THE PLAINS

At a later date two bedrooms may be added at the right, if desired, and the floor plan would then be very similar to that of the Previor, shown on Page 9.

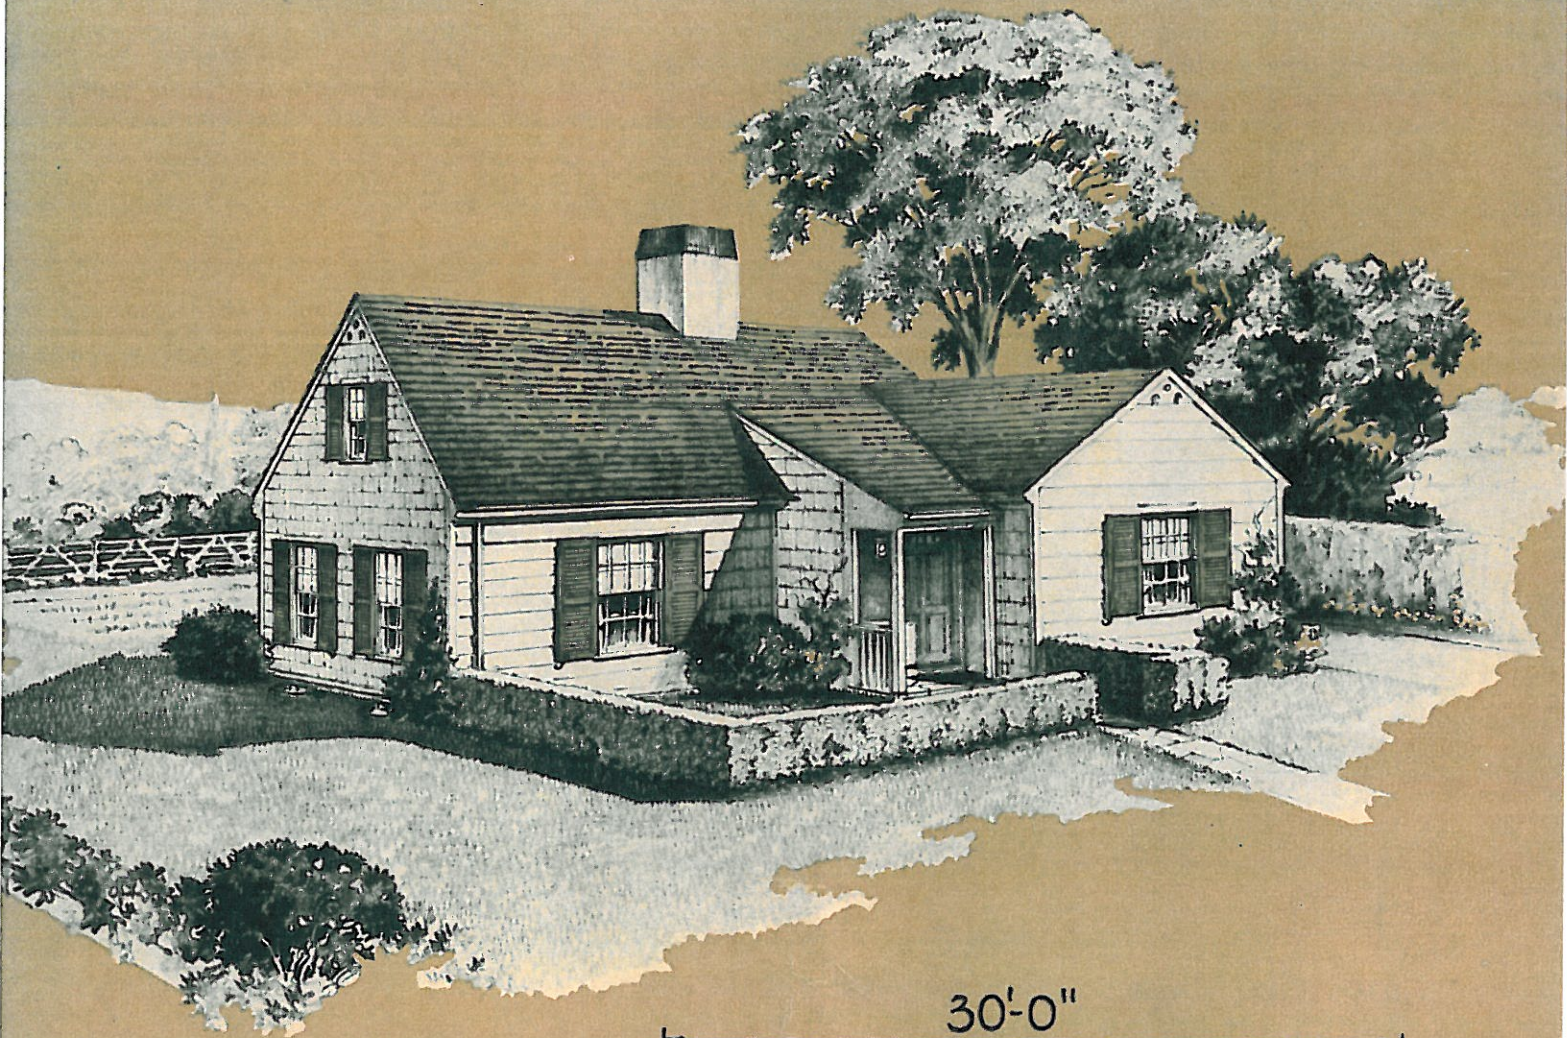

★ 9,928 CUBIC FEET

Blueprint Working Drawings Promptly Available

This plan book is designed to help you decide upon the type of home best suited to the needs of you and your family. We hope it has served that purpose and, the experience and resources of our organization are at your disposal. We shall be glad to obtain for you complete blueprint working drawings and material list of any of these homes and give you any further information and assistance. There is, of course, no obligation.
