Build for a Lifetime

The erection of a new barn is an event that usually comes but once in a lifetime. To help you build SUCCESSFULLY without difficulties or extra expense, we offer the services of our Farm Building Department.

We Know Your Problems

Every man in this organization is an expert and has specialized in barn construction and farm problems for many years. They know your needs—the requirements of your stock—and will give you a building combining utility, economy, convenience, and good architectural design.

Saves Half the Labor Cost

Blue printed working plans come with your “Honor Bilt” barn. Our plans are COMPLETE—even the smallest details are clearly shown. Every piece of framing lumber, cut to exact measure (see pages 24 and 25), is shown and marked with numbers on the lumber itself. All guesswork is eliminated. You can see where every piece belongs and make every minute count in the erection of your barn. The “Honor Bilt” way saves half the labor cost.

There Are No Extras

But that’s not all! With every “Honor Bilt” barn you get a “Certificate of Guarantee” that takes the worry out of building. You know before you start how much your building will cost complete. One price covers everything. THERE ARE NO EXTRAS.

To Suit Your Needs

The barns we offer in this catalog are designed for any interior arrangement. They have been built many times and experience proves they are correct. You will have no difficulty in selecting a barn that meets your requirements, the interior of which can be arranged to suit your own needs.

Send Us a Sketch

Use the sketch sheet enclosed to indicate floor arrangement you prefer. Be sure to mention the size barn and the number of stock to be housed. We will give you a complete estimate on a barn meeting your special needs, including cost delivered to your freight station.

SEARS, ROEBUCK AND CO., PHILADELPHIA
BUILD YOUR BARN LIKE A SKYSCRAPER!

BUILD YOUR new barn right! Fortify yourself with the same scientific certainty that marks the towering skyscraper—the great bridge—the powerful ocean liner—the certainty of standardization. Let others take a chance with the "hit or miss," out of date and wasteful methods of construction—but build your barn the "HONOR BILT" Already Cut and Fitted way.

This is the day of standardization—of efficiency—of "made to measure" and "Cut to Fit" perfection. The American farmer today, more than ever before, knows that the same successful building practices that have made possible the quick and economical erection of the modern office and factory building, can be applied equally well to the erection of his factory—the farm barn.

Farming today is a business just like any other industrial activity and good management is an essential for every business success. A new barn represents an expenditure which should be viewed as an investment that will pay full interest.

Under conditions existing today, the good business farmer knows that to keep the cost of his barn within the bounds allowed by conservative business management he should profit by the example of some of our successful industrial plants.

The same scientific principles involved in the planning and construction of the skyscraper—the modern factory—are applied to the "HONOR BILT" barns offered in this book.

By a judicious selection of materials, the advantageous use of them, and modern methods of construction, we have reduced the ultimate cost to give full returns on the initial investment.

All of the framing lumber is carefully Cut and Fitted on electrically driven machinery; absolutely true cuts that give perfect joints are the result. The doors and windows are factory made, ready to hang. Waste materials and waste labor have been eliminated. On pages 2 and 3 you have the proof that a saving of nearly one-half in carpenter labor alone is actually possible.

"HONOR BILT" barns, moreover, are designed to meet as nearly as possible the needs of the American farmer. The Modern Barn is rapidly becoming standardized and the three designs described on pages 9, 10 and 11 are illustrations of actual construction by practical men. They will meet almost any demand for interior arrangement.

Proof of Big Savings by

The Honor Bilt Way Took 433 Hours to Build

These pictures, backed by certified testimony, prove the great saving of time, labor and material that is made possible by building an "Honor Bilt" Already Cut and Fitted Barn. Study the pictures carefully. They show why the modern and economical ready cut way of barn building will save almost one-half the labor required by the old fashioned and wasteful method.

Both barns are exactly the same in size, 34 feet wide and 56 feet long, and were built under the same weather and labor conditions and in the same locality. The erection in both cases was done by an average barn construction crew, consisting of one carpenter foreman and four handy men. The barns are both sturdily built, the labor having been done as carefully on one as on the other, yet one barn was finished 360 hours ahead of the other.

Here is the reason: The same successful time and money saving principles that have made possible the quick and economical erection of the modern skyscraper were used in the construction of the "Honor Bilt" Barn. The framing lumber was delivered on the job cut to exact length and shape. There was no figuring, measuring or cutting of the material to do. The working plans accurately marked and numbered to correspond with like numbers on the lumber made it possible for the workmen to start right in and nail the frame together without losing valuable time in first getting the material ready.

The other barn was built in the ordinary way. The lumber was furnished in stock lengths just as it comes from any local lumber yard. Even though the carpenter had a complete set of barn plans to follow, knew his business and worked fast, it took many hours of real labor to measure and cut the heavy framing lumber with hand saws. Turn to pages 24 and 25. Here you see the frame of a barn. The framing members and their relation to each other are shown. Try to figure out the time needed to compute the different lengths and bevels, not to mention the cutting of the lumber with ordinary hand saws.

The "Honor Bilt" system of barn building has saved many of our customers as much as $900.00 on carpenter labor alone. You can make a similar saving, depending on the size barn you build; in fact, if you wish, you can save all of the labor expense by erecting your barn yourself with just the help of your own farm labor. Our specially drawn and detailed plans,
Building the Honor Bilt way

The Ordinary Way Took 793 Hours to Build

together with ready cut lumber, makes the building of your barn a simple undertaking. It really is a great satisfaction and a well deserved pride to be able to say that you put up your barn practically all by yourself, and by doing it yourself, you will save money that you can use for other purposes.

Coupled with this big saving in labor, you save additional money on the price of the barn itself. There is no waste lumber to pay for and, by selling direct from our mill to you, we eliminate all of the middleman's profit and expense that you pay when you buy locally. All of these reasons combined make it possible for you to get a better and stronger barn at a lower price than anywhere else.

Our Guarantee Is Backed by One Hundred Million Dollars

Every "Honor Bilt" Barn is guaranteed to be exactly as represented and to give perfect satisfaction. Our one low price covers everything needed to build the barn from the foundation to the ridge. Our quantities are guaranteed — there are no extras to buy or to pay for.
REAL satisfaction is guaranteed when you build your barn the "Honor Bilt" Ready-Cut way. Read owners' letters telling of high quality material, big savings, prompt service, accurate fit and general satisfaction.

**Good Materials Saved $500.00**
Built by W. L. Alexander

"I like my barn and saved at least $500.00 on it. I think the materials are as good as could be gotten."

**Plenty of Material**
Built by George Bell

"The material furnished for my 'Honor Bilt' barn is much better than that usually used. Plenty of material was furnished and I am well satisfied. We made a saving of about one-third by getting the ready-cut lumber from Sears, Roebuck and Co."

**Well Pleased**
Built by Peter Heinrichs

"I am very much pleased with my 'Honor Bilt' barn. The material is excellent quality, and I am in favor of your labor saving, ready-cut method of construction. I saved $400.00 by ordering my barn from Sears, Roebuck and Co."

**All Pieces Fit Perfectly**
Built by the Genoa City Poultry and Dairy Farm

"We did not have any trouble building our new barn. All pieces of lumber fit perfectly. We did all of the work ourselves and had plenty of material to finish the building. Perfectly satisfied with our 'Honor Bilt' Modern barn."

**Addresses Furnished on Request.**
SEARS, ROEBUCK and CO.'s barns are nationally known for outstanding quality and value. Designed by experts, "Honor Bilt," to last a generation, but priced low. That's why owners recommend our farm buildings to their neighbors.

**What Others Say**

**Best in Locality**
Built by E. F. Creager

"My barn is the best in this locality for good appearance, convenience and strong construction. Though I had no previous experience, I put up my 'Honor Bilt' barn myself. I am thoroughly sold on the idea of ready-cut material, as it saves much time and money. I made a saving of $500.00."

**Needed No Carpenter**
Saved $1,000
Built by Homer R. Henry

"We are very much pleased with the barn we bought from you. Did not find it necessary to hire a carpenter at all. I saved at least $1,000.00 on my barn."

**More Than Pleased**
Built by John B. Davidson

"I wish to thank you for the barn which I bought from you. It is satisfactory in every way, and I am more than pleased with it."

**Fair and Square**
Saved $400.00
Built by William R. Hatch

"Sears, Roebuck and Co. surely is a fair and square company to deal with, and I'm not afraid to recommend them to anyone for building material or anything else. They have saved me about $400.00 on my barn."

**Saved at Least**
$800.00
Built by Walter J. Stout

"I am more than pleased with my 'Honor Bilt' barn. According to my figures I saved $800.00. I will be pleased, at any time, to recommend the quality and material of your 'Honor Bilt' barn."

Addresses Furnished on Request
Let Us Help You Plan Your Barn
Correct Size Is Your First Problem

The size of your barn depends upon the number and kind of live stock to be housed, storage capacity and individual ideas. The first point to consider, however, is whether the facing-in or facing-out method of inside arrangement is desired. We can furnish the inside of your barn either way. Barn No. 5299, illustrated on page 30, is especially designed for the facing-in arrangement. If you decide to use the facing-in arrangement, your barn should be built at least 34 or 36 feet wide.

In almost every case, the most satisfactory results are secured by facing the animals out, arranging the animals in two rows lengthwise of the barn with an 8-foot driveway or cleaning alley back of the animals. For the facing-out method, the barn should be at least 34 or 36 feet wide.

The following information will help determine the size of the stalls, pens, etc., and the length of the barn: For best results a single horse stall should be 5 feet wide; double horse stall, 9 feet wide; cow stall, 3 feet 6 inches wide; bull pen, 10x12 feet; calf pen, allow 2 feet width for each calf in stanchion. For small grain storage allow 1½ cubic feet per bushel. For ear corn storage allow 2½ cubic feet per bushel.

The above information will make it easy for you to determine the size of your barn. The Sketch Sheet, enclosed with this catalog, will also make it easier for you to send us a sketch of the floor plan to suit your needs. Just as soon as we receive your letter and sketch telling us what your requirements are, we will promptly quote you our low, freight paid, money saving price on your barn.

FREE PLANNING SERVICE

Here are a few good reasons for buying one of the standard sizes shown:

1. The proportions are better from an engineering and architectural viewpoint.
2. These sizes have been built many times. All errors have been eliminated and improvements made that would be impossible if the barn were built but once.
3. We stock all material in these sizes and give better service.
4. The cost per square foot is more economical.
5. There is no lost time in making plans drawn special to your order.

By making your selections from this catalog you are sure to have a Modern Barn that you will be proud to own and which will prove to be a good investment. Honor Bilt* barns combine sound construction, permanence, economy and pleasing appearance.

Stock Sizes: After deciding which barn you wish to build then note the stock sizes below in which the barn can be furnished. These barns, of course, can be furnished in any size, but it will be to your advantage to select a stock size. Unless your requirements call for a special size, to confine your selection to a stock size listed below, if possible. It will mean a greater saving and satisfaction.
Practical Method of Locating Girder Posts

The above illustration shows standard spacing of girder posts and sizes of feed alleys, manger, cow stall platforms, gutters, and cleaning alleys.

Combination horse and dairy barn floor plan arrangement. This floor plan is suitable for all barns with an 8-foot driveway running lengthwise through the barn.

Box Stall, Single or Double Horse Stalls and Mangers. Stall partitions are made of heavy 2-inch planks spaced 2 inches apart. The factory made door for the box stall is furnished ready to hang in place. Prices on material for stalls quoted on request.
What an “Honor Bilt” Barn Means to You

General Specifications of Material and Construction

A GOOD farm is worth good buildings, and a well constructed, well lighted and well equipped barn is a necessity on every farm.

THE NEED OF A GOOD BARN No investment the farmer makes brings a greater return than a good barn. The time has passed when any farmer can afford to say, “I'll get along a year or two more before I build the barn I need.” Nowadays the marketable value of farm crops is too big, and the labor needed to produce them is worth too much, to allow them to depreciate on account of poor storage facilities. The man who lets his live stock and high priced farm implements suffer for the lack of a new barn is simply throwing his money away.

CONTENTED HELP Today, moreover, farm labor commands a good wage and is independent. Unless you can keep your farm hands contented, they will shift about like the wind—here today, there tomorrow. To keep a good farm hand or even your own boy on the farm, you must keep him satisfied. Making the barn a bright, cheery and up to date place to work in is a means to that end. Don't lose sight of the fact that a good barn means more work actually done, and the end of the season will find you with a larger balance in the bank.

TESTED AND PROVED PLANS The “Honor Bilt” farm buildings offered in this book are designed by practical men who know the needs of the American farmer and the requirements of his stock. Every model has been tested by actual construction and use. They represent for the most part the best plans and ideas of construction contributed by the thousands of progressive farmers who write to us every year.

YOUR NEEDS CONSIDERED A large variety of farm buildings are illustrated. Our study of rural requirements convinced us that conditions in the various sections of the country and on different farms were not sufficiently alike so that any one type, design or plan of barn would meet the demand of every farmer. The man building a new barn, just like his neighbor building a new farm home, has his own individual problems to work out and his own ideas and tastes to satisfy. "Honor Bilt" barns, therefore, have been designed to meet every demand for interior plan and can be furnished with any desired arrangement of the doors and windows and in almost any length and width.

ECONOMICAL CONSTRUCTION Barn building, so far as the design- ing of the frame is concerned, has really been standardized. The

three types of construction shown and described on the following pages represent typical examples of plank frame construction generally used today and recommended by every authority on the subject of barn building. There is a distinct advantage and a saving of cost of the completed barn in the plank frame type of construction. It saves in the cost, because the framing lumber is more easily handled on the job, takes less time to erect and, what is more important, requires no skilled labor to construct, as all of the framing is Cut to Fit on modern machinery at our factory.

STRENGTH AND QUALITY OF FRAMING The strength of your barn depends upon the proper size and quality of the framing lumber and the right method of construction. When scientifically designed and constructed according to our tested plans and built with our high grade No. 1 Oregon Fir or Pacific Coast Hemlock framing lumber, we can well afford to guarantee the strength and durability of your barn.

WEATHER RESISTING SIDING For the outside walls, including siding and trim, we recommend CYPRESS, “THE WOOD ETERNAL.” For outside use where it is exposed to the weather, CYPRESS stands in a class by itself. Bulletin No. 272 of the U. S. Department of Agriculture states that CYPRESS Farm Buildings are in excellent preservation after 100 to 200 years, and others of like character are frequently reported. For our less expensive barns we recommend Oregon Fir or Pacific Coast Hemlock, which will give lasting service and complete satisfaction, if kept properly painted.

For full description of the different grades and patterns of Doors, Windows, and Siding refer to pages 12 and 13; also note “Honor Bilt” quality specifications given for each barn. Study these details. Sears, Roebuck and Co. assures you bigger value for every cent of your money. Only our great factory resources and extensive building experience enable us to quote the low prices in this catalog.

However, we realize that price is not your only thought when you select a barn. The quality must be there, too. There must be enough material to build it complete according to our plans. It must be strongly built throughout and include tested ideas in design and convenience, as well as economy. All of these features must be taken into account if you are going to be permanently satisfied with your new barn. We guarantee to satisfy you perfectly when you buy an “Honor Bilt” Barn. See our guarantee on the inside back cover.

Fir. Already Cut and Fitted.

ANCHOR BOLTS—1½-inch x 16-inch complete with washers.

NOTE—Specifications do not apply to barns under 28 feet in width. For smaller barns the framing lumber has been reduced in size, but is of ample dimension to insure the necessary strength and rigidity.

Cross Section of Barn 36 Feet Wide

Gambrel Roof Braced Rafter Barn
All Framing Lumber Already Cut and Fitted

The framing of the barn, especially the barn roof, is one of the most important problems in the design and construction of the farm barn. One of the most approved methods of plank frame construction is illustrated above.

The popularity of this type of barn framing is due largely to the fact that no large or heavy timbers are required and this makes it easy for the farmer to build with just the assistance of the help usually available in every rural community. It is the most suitable model for a farm barn where both storage and stabilizing capacity is wanted and which is to be built on a level plot of land. Experience has shown that properly anchored to a substantial foundation, this barn is capable of resisting the hardest wind storm.

The framing members—the studs, joists, rafters, etc.—are all spaced 28 inches apart. The wall plate or sill is doubled and well anchored to the foundation. All outside wall studs run continuous from the lower wall plate to the top plate. The special feature of this type of framing is the trussing or bracing of the roof. Each set of four rafters is braced individually to form a light truss, and no other purlins or extra framing is needed. The braces offer no obstruction and in no way interfere with the moving away of the hay, the loft being as open as a railroad tunnel. The mow joists run crosswise and are supported by two built-up continuous girders running lengthwise through the barn. It will readily be seen that the mow joists form an important and necessary part of the structure, as they effectively tie the side walls together and prevent the studs from buckling.

In building this type of barn the framing can be quickly and more economically done on the ground before it is raised into position. For long barns the side walls can be raised in sections of 16 to 20 feet. After the side and end walls have been erected and the floor joists set they can be covered with the siding and flooring. This will stiffen that part of the barn frame that is already up. The siding is usually put on horizontally.

The mow floor provides an ideal level place for building the roof trusses. This is readily accomplished, for all the rafters and braces come Already Cut and Fitted. When complete, the trusses are piled on the mow floor one above the other or on a temporary platform at the height of the top plate. The foot of each truss is then placed on the top plate and raised with a gin pole, block and tackle. After the trusses are securely braced, the rafters are set with lengths of roof sheathing, the lower braces are spiked to the rafters and wall studs. After all of the trusses and roof framing are complete, a 36x60-foot barn in approximately 10 working days.

SEARS, ROEBUCK AND CO. W L S World's Largest Store
Cross Section of Barn 36 Feet Wide

Gambrel Trussed Roof Barn
All Framing Lumber Already Cut and Fitted

Years ago, when timber was plentiful and cheap, ninety-nine out of one hundred barns were erected with no thought given to the actual strength of the timber or its fitness for the purposes intended. Today, heavy timbers are seldom used; timber framing is expensive, carpenters command good wages and barn raising "bees" cost money.

In order to reduce his building costs to a minimum and still insure the necessary strength and rigidity, the farmer today is forced not only to conserve every board foot of lumber, but also to choose only such lumber that is adapted especially to structural purposes. And just as the sicle has been replaced successively by the cradle, the self rake and the binder, so the old time cumbersome and inefficient heavy timber framed barn has been replaced by the Modern Gambrel Trussed Roof Barn illustrated above.

This type of barn is especially suited to barns where entrance to the mow with team and load requires a barn with a wide side wall. Strong in construction, easy to build and economical in the use of lumber, this barn is a favorite in those states where dairying is the foremost agricultural pursuit and barns providing liberal space, not only for the stabling of the herd, but also for the season's crop of hay, grain and roughage are a necessity.

* In the erection of this barn the entire first floor or basement is built first. The truss members are then assembled on the mow floor, joined, knotted and bolted together. It is a simple matter to erect the trusses. This is done by means of a gin pole, block and tackle or by the aid of a team of horses or a farm tractor. When the trusses are raised to the proper position they are secured in place with the nailing girts and top plates. Other structural members, such as wall braces, wall posts, purlins, rafters and ridge boards are nailed and bolted in position after two or three trusses have been raised and plumbed. A glance at the illustration above plainly shows that the trusses are so constructed and so spaced that they neither interfere with the use of a modern hay handling outfit.

The framing of the side and end walls is known as a post and girder construction. The posts, or hand framing, of the wall and one or more intermediate posts are erected. Diagonal wall braces, running from the top plate to sill, stiffen and strengthen the walls and increase its rigidity. The nailing girts are spaced about three feet apart and are nailed to the truss and intermediate posts. The siding is nailed on vertically. By omitting the nailing girts and spacing the wall studs two feet on center, the frame can be adapted for horizontal siding.

The framing, especially of the roof, is the most difficult part of the building of this barn. With our Already Cut system it takes about as many days to erect as it used to take weeks under the former "rule of thumb" method. A real saving, both in time and money, is bound to result when all the calculating, cutting and fitting is done at our factory by experienced barn builders and on accurate machinery.

Turn to pages 24 and 25. If you have your material for this modern barn comes to us Already Cut and Fitted. You or your carpenter can devote all of your time to the actual erection of your barn. No waste of material, no time lost in figuring, measuring and guessing on the job and the result is a big saving in the final cost.

GIRDERS—3 pieces 2x10-inch No. 1 Oregon Fir or Pacific Coast Hemlock for barns 30 and 32 feet wide. Four pieces 2x6-inch Oregon Fir or Pacific Coast Hemlock for all barns, over 32 feet wide. Already Cut and Fitted.

GIRDERS POSTS—6x6-inch solid No. 1 Oregon Fir or Pacific Coast Hemlock with 6x6-inch liners. 22% in. lengths of barns 30 and 32 feet wide, 6x6-inch solid No. 1 Oregon Fir or Pacific Coast Hemlock with 6x6-inch liners for barns over 32 feet wide. Already Cut and Fitted.

ANCHOR BOLTS—3x6-inch, complete with heads.

NOTE—These specifications do not apply to barns under 30 feet in width.
Roebuck
20062

Dear Customer:

Here is the book of "HONOR BILT" barns in which you are interested. We have made it complete. It represents the boiled-down experience—the practical ideas of thousands of farmers who write to us every year—together with the knowledge of our barn architects, who have grappled with farm building problems for the better part of a lifetime, and who know actual farm requirements.

Frankly, we wish we could be with you as you page through it. We would like to read aloud every word printed on its pages and point out to you the merits of Our Guarantee—Our Labor Saving Ready Cut System of Construction—The Good Material we furnish and How Much Money we really can save you when you build your barn.

When you buy a barn from us you get materials that have been correctly designed and selected for your COMPLETE BUILDING. You know beforehand just what the total cost will be. OUR ARCHITECTURAL SERVICE assures you of PROPER SPECIFICATIONS AND PLANS. You save both time and money by placing one order for the whole barn complete with us at our low, wholesale, direct-from-factory price. We furnish exactly the kind of floor arrangement wanted for your individual needs. We will CUT EVERY PIECE OF FRAMING LUMBER on modern special machinery, READY FOR YOU TO NAIL IN PLACE. You can have it erected by the time the average builder has figured out where to start.

"HONOR BILT" barns are really high grade modern barns—right in design, right quality and of sufficient quantity of materials. Remember, your protection is our written guarantee backed by our resources of $100,000,000.00.

A large variety of practical barns are shown. As a guide, our catalog shows the price of one size of each design. We have not printed prices for other sizes because most farmers have preferences for floor arrangements to meet their own individual needs. As we want to furnish just the arrangement you wish, we ask that you select the design of barn you like best. Then on the ruled blank enclosed make a small pencil sketch of the floor arrangement you want, giving size of barn, and we will quote the exact total price delivered at your station complete, exclusive of masonry material.

Please don't overlook the fact that when high quality is considered—Sears, Roebuck and Co. can give you best barn value in the U. S. A. Don't fail to get our proposition before starting to build, because we can save you money.

Yours truly,
SEARS, ROEBUCK AND CO.
In recent years there has been a tendency towards a better, more permanent and a more economical construction of the American farm barn. The problem has been to secure increased loft capacity, without the use of cumbersome and costly timbers, and to provide a mow with an open center permitting the operation of a modern hay carrier from one end of the loft to the other. In the heavy hewed timber framed barns that were popular a decade or two ago, not only did the cross beams and supporting timbers interfere with carriers, but much valuable space was lost on account of such timbers making parts of the mow entirely inaccessible.

The insistent demands for a barn that would fill the purposes for which it is to be used and that also would provide for the proper housing of the crops and animals, so that these could be taken care of with a minimum amount of labor, led to the development of the plank frame type of construction—the Braced Rafter Barn and the Trussed Roof Barn already described. While these two types met every practical requirement, are economical in the use of material and easy to erect, authorities responsible for their development still realized that something was lacking—that something was beauty.

Barns have their own individuality and no matter how simple or inexpensive they are, may still be made pleasing and dignified and give distinction and charm to the entire farmstead by the simple application of architectural treatment. Is it any wonder, then, that the barn illustrated above is conceded by progressive farmers and experienced barn builders to be a masterpiece?

The "HONOR BILT" Gothic Roof Barn—Already Cut and Fitted—owes its widespread popularity to the "know-how" of our experienced barn architects who designed and proportioned its graceful roof lines; it owes its durability to the quality materials that are specified in its construction and to the way the materials have been figured out to carry maximum loads and stay rigid and plumb even under severest conditions; it owes its economy of cost, which is still further increased by our wonderful already cut system of construction and the ease in which it can be erected when our simple working plans and complete instructions are followed.

This barn is not a novelty, but a practical, economical structure that combines all of the best features of the rectangular barn and the beauty, symmetry and utility of the round roof. It permits of a generous loft and, what is more vital, the loft is open and unobstructed as an airship hangar, because the roof itself is self-supporting, each set of ribs creating an independent arch and forming a very rigid completed structure. The greatest savings are made, however, in quick and perfect drainage of all surface water and offers the least possible resistance to high wind pressure.

The erection of an "HONOR BILT" Already Cut and Fitted Gothic Roof Barn is so simple that even the most inexperienced barn builders can build them without the aid of skilled carpenter labor of any kind. The same principles recommended for the construction of the side and end walls of the two aforementioned types are used. Detailed drawings are furnished, showing how the rafters are built. This is really such an easy job that a boy can do the work. Each arch on completion is raised with a gin pole block and tackle, secured in place and the barn is then ready for the first boards. An advantage is that little if any scaffolding is needed to erect the roof.

An "HONOR BILT" Gothic Roof Barn will not only pay for itself over and over again in everyday service, but will add more than its cost in increased value to the farm as a whole. If you build today and sell tomorrow, this barn, like every other "HONOR BILT" Modern Barn, will pay a profit on the investment.

Get Our Low—Freight Paid—"Direct to You" Price on Your Barn
Better Built Doors for “Honor Bilt” Barns

Factory Made and Ready to Hang

“HONOR BILT” barn doors are constructed throughout of Cypress, “The Wood Eternal.” They are built by modern, labor-saving machinery in our big millwork factory. Made of dressed and matched lumber and strongly braced and battened. “HONOR BILT” doors are shipped painted with one coat of linseed oil paint, come ready to hang, saving time and labor, and are better than doors made on the job by hand carpentry. Built of Cypress, they will withstand both wear and weather, will not warp or bind, and will hang true and straight.

Double Sliding Driveway Doors for the ground floor of “HONOR BILT” barns are 8 feet 2 inches by 8 feet in size and 3½ inches thick. For entrance with team and load into the mow, these doors can be furnished 12 feet 4 inches by 12 feet in size, with a small door built in for personal access.

High Grade Barn Sash and Frames

All sash for “HONOR BILT” barns are made of clear, kiln dried, California White Pine, 1½ inches thick. They are tenoned and mortised, carefully machined and sanded and are glazed with good quality glass. The crating of the sash for shipment is carefully done and delivery in perfect condition is guaranteed. High grade sash frames, made of practically clear lumber, are provided for “HONOR BILT” barns. The outside casings and sills of our frames are made of Cypress, the very best wood for the purpose. All frames are shipped carefully bundled, cut to exact size, ready to nail together and are superior to frames made on the job.

The Dutch Door illustrated below can be furnished where one or more additional doors are needed. The advantage of this door is that the upper wing can be opened for ventilation, independent of the lower wing. It is an ideal hinged door and is furnished 3 feet 9 inches by 7 feet 10½ inches in size.

Two kinds of gable hay doors—the gable sliding type illustrated and the hinged drop leaf door—are used on “HONOR BILT” barns. The counterweights for the sliding doors are best made of concrete and are to be furnished by the owner. The hinged door can be easily opened and closed with the aid of the hay carrier. The doors are 9 ft. 4 in. wide by 11 ft. 8 in. high and 1½ in. thick.

GET OUR LOW—FREIGHT PAID—“DIRECT TO YOU” PRICE ON YOUR BARN
ABOUT OUR BARN SIDING

Medium Grade

Best Grade

Medium Grade Siding Furnished in Either Cypress, Oregon Fir or Pacific Coast Hemlock

Best Grade Siding Furnished Only in Cypress

“HONOR BILT” Barns shown in this catalog are furnished with one of four different grades of outside siding: Best Grade Cypress, Medium Grade Cypress, Medium Grade Oregon Fir or Pacific Coast Hemlock.

Best grade Cypress is our highest quality barn siding. It runs practically clear, uniform in color and has a soft even texture. Just the kind of stock that will take and hold paint and withstand the weather for a lifetime. This grade will give double the length of service of even the highest grade of white pine.

In the Medium Grades of Cypress and Oregon Fir or Pacific Coast Hemlock there are some knots, as the above illustration shows, but these are sound knots, and when the siding is painted, it has the same appearance from the outside as the higher grade siding. Such defects in no way impair the long life of the siding and we can recommend this grade for the man who must exercise economy when he builds. At our price these Medium Grades are good bargains and will give satisfaction for years.

A glance at the illustrations of Drop Siding and Double V Siding will show you the patterns of siding we furnish for the outside walls of our barns. Double V Siding is used mostly on barns that are sided vertically or up and down, and Drop Siding is only used for barns sided horizontally. Complete specifications will be found in the description of the different barns.

BARN BOARDS AND BATTENS FURNISHED, IF DESIRED, FOR ALL VERTICAL SIDED BUILDINGS
"Our Leader" Modern Barn No. 2061

WHAT an attractive addition to the farm this Gothic roof barn will make is shown by the front cover page of this book. The haymow is large and unobstructed and provides liberal space for hay, feed and roughage. With all the framing lumber Already Cut and Fitted, the erection is easy. Many of our customers have built it with only the help of the labor around the farm. This Gothic barn is one of which the owner may be truly proud. In fact, every "Honor Bilt" barn will be a source of pride to the owner for many years to come. And, the saving will always be remembered with satisfaction.

"Honor Bilt" Specifications for Barn No. 2061

Plan: Complete plans and building details accurately drawn by experienced barn architects are furnished with this "HONOR BILT" Barn.

Masonry Work: The foundation walls are to be built of concrete, or other masonry material, and extend 2 feet above the grade line.

Anchor Bolts: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

Construction: This barn is of a stud and girt side wall and a Gothic roof construction. See illustration on page 11, which clearly shows this type of barn frame. Nailing girts are 2x6 inches and are spiked to the studs which are spaced 3 feet on center. The joints are spaced 16¾ inches apart; the sill and top plates are doubled; all corner posts are built up of three heavy studs and heavy built-up girders run lengthwise through the barn. Simple details make it easy to build the Gothic roof rafters. The ground floor height is 8 feet 6 inches.

Framing Lumber: Nothing but No. 1 Douglas Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber and the circular verge and frieze is Already Cut and Fitted. For the size of all studs, joists and other framing members, read the "HONOR BILT" specifications on page 11.

Siding: The outside walls are covered with a dressed and matched double "V" siding of Douglas Fir, Pacific Coast Hemlock, or Cypress, "The Wood Eternal," put on vertically. Where weather resisting qualities are wanted, Cypress cannot be excelled. For illustrations and descriptions of siding grades and patterns, see page 13.

Mow Flooring: The mow joints are covered with a tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles 1x6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 2 Red Cedar Wood Shingles laid 4 ½ inches to the weather. Oriental Slate Surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $4.50 extra. For illustration of Asphalt Shingles, see page 40.

Doors: Only Clear Cypress, "The Wood Eternal," is used for the doors. Double sliding doors, 6 feet 2 inches by 8 feet, are provided at each end of the barn. A single sliding door is located at each corner of the barn when furnished 24 feet wide. The hinged gable hay door is 9 feet 4 inches by 12 feet in size. The small door at the mow level is convenient for many purposes.

All the doors come "Ready Made," ready to hang in place, painted with one coat of lined oil paint, and are better than doors made on the job by hand carpentry. Heavy plank door frames, outside casings and surfaced track plank are also included. For description and illustration of doors, see page 12.

Windows: Clear California White Pine sash are liberally provided. The sash, divided into nine lights, are 1 ½ inches thick, and glazed with clear glass. The opening size is 2 feet 7 inches by 3 feet 5 inches. The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together.

Windows are spaced 6 feet on center. Ventilation shields are included. For full description and illustration of windows, see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze, is Douglas Fir, Pacific Coast Hemlock, or Cypress, "The Wood Eternal." All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combination see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hinges we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 24 feet, 28 feet, 30 feet, 32 feet, 34 feet, 36 feet and 40 feet wide. For information how to select the size of your barn, see page 6.

"Ideal" Modern Barn No. 2060

Pleasing appearance is but an added feature to the simple construction, strength and usefulness of this well proportioned, braced rafter barn. The large nine-light windows provide an abundance of sunshine and fresh air and they are fitted with ventilation shields to protect the stock from direct drafts. A rather flat, rolling landscape will make the best setting for this fine barn. Adapted to the needs of a general purpose barn, it nevertheless embodies all of the essentials of a modern dairy barn. The materials are first class throughout and its erection is possible for a surprisingly small amount of money.

Plans: Complete plans and building details accurately drawn by experienced barn architects are furnished with every "HONOR BILT" Barn.

Masonry Work: The foundation walls are to be built of concrete, or other masonry material and to extend 2 feet above the grade line.

Anchor Bolts: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

Construction: This barn is of a balloon frame and braced rafter roof construction. See the illustration on page 9, which clearly shows this type of barn frame. All framing timbers are spaced not over 2 feet on centers; each set of rafters is individually braced; the sills and top plates are doubled. Barns over 24 feet in width have two built-up heavy plank girders running lengthwise through the barn. To obtain maximum strength, all corner posts are built up of three heavy studs. The ground floor height is 8 feet 6 inches.

Framing Lumber: Nothing but No. 1 Oregon Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber is "HONOR BILT," as specified on page 9.

Siding: The outside walls are covered with a dressed and matched drop siding of Oregon Fir, Pacific Coast Hemlock or Cypress, "The Wood Eternal." Where weather resisting qualities are wanted, Cypress cannot be excelled. For illustrations and description of siding grades and patterns, see page 13.

Mow Flooring: The mow joists are covered with a tongued and grooved No. 1 Oregon Fir or Pacific Coast Hemlock. This flooring can be driven up tight to prevent the hay dust from sift through the stock below.

Roof Sheathing: A good grade of 1 x 4-inch Oregon Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles 1 x 6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 7 Red Cedar Wood Shingles laid 4 1/2 inches to the weather. Oriental Slate Surfaced 4-inch Asphalt Shingles instead of wood shingles, are $4.00 extra. For illustration of Asphalt Shingles see page 46.

Doors: Only Clear Cypress, "The Wood Eternal," is used for the doors. Double sliding doors, 8 feet 2 inches by 8 feet, are provided at each end of the barn. A single sliding door is located at each corner of the barn when furnished 24 feet wide. The sliding gable hay door is 9 feet 4 inches by 12 feet in size. The small door at the mow level is convenient for many purposes. All the doors come "Ready Made," ready to hang in place, painted with one coat of linseed oil paint, and are better than doors made on the job by hand carpentry.

Heavy plank door frames, outside casings and surfaced track plank are also included. For description and illustration of doors see page 12.

Windows: Clear California White Pine sash are liberally provided. The sash, divided into nine lights, are 1 3/4 inches thick, and glazed with clear glass. The opening size is 2 feet 7 inches by 3 feet 5 inches.

The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together.

Windows are spaced 6 feet on center. Ventilation shields are included. For full description and illustration of windows, see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze is Oregon Fir, Pacific Coast Hemlock or Cypress, "The Wood Eternal." All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration of hardware see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 24 feet, 28 feet, 30 feet, 32 feet, 34 feet and 36 feet wide. For information how to select the size of your barn, see page 6.

Modern General Farm Barn No. 2062

HERE is a high grade modern barn at a bargain price. Mixed stock and farm horses can be comfortably and economically stalled, and there is ample mow capacity for the storage of a bumper crop of hay and grain. "HONOR BILT" quality is always standard and the same high quality building material specified for other "HONOR BILT" barns will be found in this barn. The man who is forced to make every dollar count will find this general farm barn, Already Cut and Fitted, an exceptional money saving value.

"Honor Bilt" Specifications for Barn No. 2062

**Plans:** Complete plans and building details, accurately drawn by experienced barn architects, are furnished with this "HONOR BILT" barn.

**Masonry Work:** The foundation walls are to be built of concrete, or other masonry material, and extend 2 feet above the grade line.

**Anchor Bolts:** Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

**Construction:** This barn is of balloon frame and braced rafter roof construction. See illustration on page 9, which clearly shows this type of barn frame. All framing timbers are spaced 22 1/2 inches apart: each set of rafters is individually braced; the sills and top plates are doubled. Barns over 24 feet in width have two built-up heavy plank girders running lengthwise through the barn. To obtain maximum strength, all corner posts are built up of three heavy studs. The ground floor height is 8 feet 6 inches.

**Framing Lumber:** Nothing but No. 1 Douglas Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber is Already Cut and Fitted. For the size of the studs, joists and other framing members, read the "HONOR BILT" specifications on page 9.

**Siding:** The outside walls are covered with a dressed and matched drop siding of Douglas Fir, Pacific Coast Hemlock or Cypress, "The Wood Eternal," Where weather resisting qualities are wanted, Cypress cannot be excelled. For illustrations and description of siding grades and patterns, see page 13.

**Mow Flooring:** The mow joists are covered with a tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock. This flooring can be driven up tight to prevent the hay dust from sift ing through on the stock below.

**Roof Sheathing:** A good grade of 1x4-inch Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles 1x6-inch square edge boards laid close together are furnished.

**Shingles:** Our price includes Extra Clear 5 to 2 Red Clear Wood Shingles laid 4 1/2 inches to the weather. Oriental Slate Surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $38.00 extra. For illustration of Asphalt Shingles see page 40.

**Doors:** Only Clear Cypress, "The Wood Eternal," is used for the doors. Double sliding doors, 8 feet 2 inches by 8 feet, are provided at each end of the barn. A single sliding door is located at each corner of the barn when furnished 24 feet wide. The hinged gable hay door is 9 feet 4 inches by 12 feet in size. The small door at the mow level is convenient for many purposes.

All the doors come "Ready Made," ready to hang in place, painted with one coat of linseed oil paint, and are better than doors made on the job by hand carpentry.

Heavy plank door frames, outside casings and surfaced track planks are also included. For description and illustration of doors see page 12.

**Windows:** Clear California White Pine sash are liberally provided. The sash, divided into four lights, are 1 1/2 inches thick, and glazed with clear glass. The opening size is 1 foot 10 inches by 2 feet 9 inches.

The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together. Windows are spaced 6 feet on center. For full description and illustration of windows, see page 12.

**Exterior Trim:** All outside finish, such as corner boards, outside casings, verge boards and frieze, is Douglas Fir, Pacific Coast Hemlock, or Cypress, "The Wood Eternal." All rafter ends and gable lookouts are of dressed lumber.

**Paint:** Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

**Hardware:** The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration of hardware see page 46.

**Nails:** Enough nails and spikes of all sizes and kinds are guaranteed.

**Sizes:** We can furnish this barn 24 feet, 28 feet, 30 feet, 32 feet, 34 feet and 36 feet wide. For information how to select the size of your barn, see page 6.

SEARS, ROEBUCK AND CO.
"Colonial" Modern Barn No. 3006

HERE is a good, plain barn at a low price, that can be erected very economically. The wide 12-foot driveway, open to the roof, can be used for the unloading or bailing of hay, for threshing or for the storage of wagons and implements. During rainy weather a driveway of this kind provides an ideal place for the repairing of farm machinery and other odd jobs. This barn can be conveniently laid out for the stabling of the stock and horses and for an economical and serviceable general purpose barn it can hardly be improved upon.

**Mow Flooring:** The mow joints are covered with a tongued and grooved No. 1 Douglas Fir, Pacific Coast Hemlock. This flooring can be driven up tight to prevent the hay dust from sifting through on the stock below.

**Roof Sheathing:** A good grade of 1 x 4-inch Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles 1 x 6-inch square edged boards laid close together are furnished.

**Shingles:** Our price includes Extra Clear 5 to 7 Red Cedar Wood Shingles laid 4 5/8 inches to the weather. Oriental Slate Surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $45.00 extra. For illustration of Asphalt Shingles see page 40.

**Doors:** Only Clear Cypress, "The Wood Eternal," is used for the doors. Large double sliding driveway doors, 12 feet 4 inches wide and 12 feet high, with small built-in door for foot entrance, are provided on both sides of the barn. Two double leaf swinging doors, 3 feet 9 inches by 7 feet 10 1/2 inches high, are also furnished at each end of the barn, except in barns 24 and 28 feet wide, there is only one door in each end.

All the doors come "Ready Made," ready to hang in place, painted with one coat of linseed oil paint, and are better than doors made on the job by hand carpentry.

**Windows:** Clear California White Pine sash liberally provided. The sash are divided into four lights, are 1 1/2 inches thick, and glazed with clear glass. The opening size is 1 foot 10 inches by 7 feet 9 inches.

The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together.

Windows are spaced 8 feet on center. For full description and illustration of windows, see page 12.

**Exterior Trim:** All outside finish, such as corner boards, outside casings, verge boards and frieze is Douglas Fir, Pacific Coast Hemlock or Cypress, "The Wood Eternal." All rafter ends and gable lookout are of dressed lumber.

**Paint:** Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

**Hardware:** The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration of hardware see page 46.

**Nails:** Enough nails and spikes of all sizes and kinds are guaranteed.

**Sizes:** We can furnish this barn 24 feet, 28 feet, 30 feet, 32 feet, 34 feet and 36 feet wide. For information how to select the size of your barn, see page 6.

“Greenfield” Modern Barn No. 3028

THE “GREENFIELD” combines all of the desirable features of a serviceable modern barn with strength and simplicity of construction. This low priced barn has a large storage capacity and provides shelter for a large number of animals at the lowest possible cost. The floor space can easily be arranged to accommodate different kinds of animals. When built 52 feet wide, the space for animals is 16 feet on each side. This leaves a 20-foot space from ground to roof down the center of the barn for hay. Machinery can also be housed in this building if necessary.

“Honor Bilt” Specifications for Barn No. 3028

Plains: Complete plans are furnished with this “Honor Bilt” Barn.

Masonry Work: The basement walls extend 7 feet above the grade line.

Construction: The illustration below shows the type of construction for this straight gable roof barn. Size of framing lumber as follows: Main studs, rafters and braces, 2x6 inches; Sills and wall plates, doubled, 2x6 inches; Girder, three pieces, 2x10 inches; girdle posts, 6x6 inches solid. All framing lumber spaced 74 inches on center when horizontal drop siding is specified. Nailing—Girts spiked to the studs spaced 8 feet on center are furnished when vertical siding is specified.

Framing Lumber: All framing lumber is of No. 1 Douglas Fir or Pacific Coast Hemlock, already cut and fitted.

Mow Flooring: The mow joists are covered with a tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock.

Roof Sheathing: A good grade of 1x4-inch Douglas Fir roof boards spaced 2 inches apart is furnished. For Asphalt Shingles, 1x6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 2 Red Cedar Wood Shingles laid 4½ inches to the weather, Oriental Slate Surfaceted 4-In-1 Asphalt Shingles instead of wood shingles, $67.00 extra. For illustration of Asphalt Shingles see page 40.

Doors: Only clear cypress is used for the doors. Two double sliding doors 8 feet 2 inches by 8 feet and two small doors at the mow level are furnished for each end of the barn. One sliding gable hay door 9 feet 6 inches by 12 feet for the front end and one hinged Dutch door 3 feet 9 inches by 7 feet 10½ inches are furnished at each end of the barn. All doors are ready made, painted with one coat of linseed oil paint. Door frames are also included. See page 12.

Windows: Clear California White Pine sash are liberally provided. The sash are divided into four lights, are 1½ inches thick, and glazed with clear glass. The opening size is 1 foot 10 inches by 2 feet 9 inches. The window frames are made of practically clear lumber. Windows are spaced 6 feet on center. See page 12.

Exterior Trim: All outside finish is Douglas Fir. All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished.

Hardware: All necessary hardware and nails are included.

Modernized Timber Frame Barn No. 2064

Here is a modified Timber Frame Barn resembling its general exterior appearance the once popular heavy timber barn built so extensively a decade or two ago. The framing timbers are built up of 2-inch planks to the desired strength and are so skillfully joined and interlocked that for strength and rigidity it is far superior to the heavy timber type of framing. Easy to erect and economical in the use of lumber, this Already Cut and Fitted barn embodies all those good features of barn framing so well figured out and arranged that its erection is possible at a very moderate cost.

“Honor Bilt” Specifications for Barn No. 2064

Plans: Complete plans and building details accurately drawn by experienced barn architects are furnished with this “Honor Bilt” Barn.

Masonry Work: The foundation walls are to be built of concrete, or other masonry material, and extend 2 feet above the grade line.

Anchor Bolts: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

Construction: A modified timber frame construction is used. The illustration above shows this type of barn frame. All framing timbers are built up of heavy 2-inch planks, the sills and top plates are doubled. Girders run crosswise through the barn. To obtain maximum strength, all corner posts are built up of three heavy studs. The ground floor height is 8 feet 6 inches.

Framing Lumber: Nothing but No. 1 Oregon Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber is Already Cut and Fitted.

Siding: The outside walls are covered with a dressed and matched double 7/8” siding of Oregon Fir, Pacific Coast Hemlock or Cypress, “The Wood Eternal.” Where weather resisting qualities are wanted, Cypress cannot be excelled. For illustrations and descriptions of siding grades and patterns, see page 12.

Mow Flooring: The mow joists are covered with a tongued and grooved No. 1 Oregon Fir or Pacific Coast Hemlock. This flooring can be driven tight to prevent the hay dust from lifting through on the stock below.

Roof Shanting: A good grade of 1x4-inch Oregon Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles 1x6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 2 Red Cedar Wood Shingles laid 4½ inches to the weather. Oriental Slate Surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $35.00 extra. For illustration of Asphalt Shingles, see page 40.

Doors: Only Clear Cypress, “The Wood Eternal,” is used for the doors. Double sliding doors, 12 feet 4 inches by 12 feet, are provided at each side of the barn. Two single sliding doors 4x8 feet are furnished for each end of the barn. The small door at the mow level is convenient for many purposes.

All the doors come “Ready Made,” ready to hang in place, painted with one coat of lime oil paint, and are better than doors made on the job by hand carpentry.

Heavy plank door frames, outside casings and surfaced track plank are also included. For description and illustration of doors, see page 12.

Windows: Clear California White Pine sash are liberally provided. The sash, divided into nine lights, are 1¾ inches thick, and glazed with clear glass. The opening size is 2 feet 7 inches by 3 feet 8 inches. The window frames are made of practically clear lumber. All frames are shipped carefully banded ready to nail together. Windows are spaced 7 feet on center. For full description and illustration of windows, see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze, is Oregon Fir, Pacific Coast Hemlock, or Cypress, “The Wood Eternal.” All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combination see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration of hardware, see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 24 feet, 28 feet, 30 feet, 32 feet, 34 feet, 36 feet and 40 feet wide. For information how to select the size of your barn, see page 6.

"Favorite" Modern Barn No. 2059

**Plan**: Complete plans and building details, accurately drawn by experienced barn architects, are furnished with this "HONOR BILT" Barn.

**Masonry Work**: The foundation walls are to be built of concrete, or other masonry material, and to extend 2 feet above the grade line.

**Anchor Bolts**: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

**Construction**: A post and gir framed and a trussed roof construction is used. The roof is supported by plank trusses, similar to the construction shown on page 10. The side wall posts and intermediate studs run from sill to top plate. Trusses are spaced 14 feet on center; the nailing girns are spiked to wall posts; the rafters and joists are spaced 21 3/4 inches apart. Barns over 24 feet wide have two built-up heavy girders running lengthwise through the barn. The sills and top plates are doubled and all corner posts are built up of three heavy studs. The ground floor height is 8 feet 6 inches.

**Framing Lumber**: Nothing but No. 1 Douglas Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber is Already Cut and Fitted and has been carefully figured out to carry maximum loads.

**Siding**: The outside walls are covered with a double "V" dressed and matched siding of Douglas Fir or Pacific Coast Hemlock, or Cypress, "The Wood Eternal," put on vertically. Where weather resisting qualities are wanted, Cypress cannot be excelled. For illustrations and descriptions of siding grades and patterns see page 13.

“Fairview” Modern Driveway Barn No. 2068

This Driveway Barn has many conveniences.
The arrangement permits driving into the barn with a load of hay or grain and unloading under cover. This is a big advantage in inclement weather.
The driveway, open to the roof, may also serve as a threshing floor or for implement storage during the winter months. The large nine-light sash provide plenty of light in either section of the barn for the stabling of horses and cows. Where these are housed under one roof, this arrangement is especially recommended.
The roof is well proportioned and the dormers above the driveway doors add considerably to the good appearance of this “Honor Bilt” braced rafter barn.

“Honor Bilt” Specification for Barn No. 2068

Windows: Clear California White Pine sash are liberally provided. The sash are divided into nine lights, are 1 3/4 inches thick, and glazed with clear glass. The opening size is 2 feet 7 inches by 3 feet 5 inches.
The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together.
Windows are spaced 6 feet on center. Ventilation shields are included. For full description and illustration of windows, see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze is Douglas Fir, Pacific Coast Hemlock, or Cypress, “The Wood Eternal.” All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration see page 46.

“Economy” General Farm Barn No. 5298

HIS BARN has been designed to meet the demands of the farmer who wishes to build a barn with a high masonry wall but who does not require a large overhead loft. With sand and gravel or native stone available for the basement wall, this type of barn can be erected for a surprisingly small outlay of money. The illustration below shows how access to the mow is possible by building into the side of a hill or dirt bank.

“Honor Bilt” Specifications for Barn No. 5298

Plans: Complete plans are furnished with this “HONOR BILT” Barn.

Masonry Work: The basement walls extend 9 feet above the grade line.

Construction: This barn is of a balloon frame and combination braced rafter and trussed roof construction. The illustration below, to the right, clearly shows this type of barn frame. All framing timbers are spaced 22½ inches apart; the stud wall is 8 feet high; the sills and top plates are doubled. Barns over 24 feet in width have two built-up heavy plank girders running lengthwise through the barn. The ground floor height is 8 feet 6 inches.

Framing Lumber: No. 1 Douglas Fir or Pacific Coast Hemlock. The framing lumber is Already Cut and Fitted.

Siding: The outside walls are covered with a dressed and matched drop siding of Douglas Fir, Pacific Coast Hemlock or Cypress. See page 13.

Mow Flooring: The mow joists are covered with a tongued and grooved Oregon Fir or Pacific Coast Hemlock.

Roof Sheathing: A good grade of 1x4-inch Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles, 1x6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 2 Red Cedar Wood Shingles laid 4½ inches to the weather. Oriental Slate Surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $45.00 extra. For illustration of Asphalt Shingles see page 40.

Doors: Only Clear Cypress, “The Wood Eternal,” is used for the doors. Double sliding doors, 8 feet 2 inches by 8 feet, are provided at each end of the barn. The hinged gable hay door is 9 feet 4 inches by 12 feet in size. The small door at the mow level is convenient for many purposes.

All the doors come “Ready Made,” ready to hang in place, painted with one coat of linseed oil paint, and are better than doors made on the job by hand carpentry. Door frames are also included. See page 12.

Windows: Clear California White Pine sash are liberally provided. The sash, divided into four lights, are 13½ inches thick, and glazed with clear glass. The opening size is 1 foot 10 inches by 2 feet 9 inches.

Exterior Trim: All outside finish is Douglas Fir, Pacific Coast Hemlock, or Cypress, “The Wood Eternal.” All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration of hardware see page 46.

Nails: Enough nails and spikes are guaranteed.

Sizes: We can furnish this barn 24 feet, 25 feet, 30 feet, 32 feet and 34 feet wide. For information how to select the size of your barn, see page 6.

Modern General Farm Barn No. 3022

Owing to the increasing popularity of the Gothic Roof, the erection of this splendidly proportioned barn will create favorable comment in any community. In general appearance this barn is rather imposing and is therefore best adapted to a site having a prominent outlook in all directions. The large 18-foot mow doors will allow the entrance of a bumper load of hay. The loft is spacious and the trusses are so located that they will in no way interfere with the easy mowing away of the hay. Great care has been devoted to the construction of this barn and all those costly and elaborate details that would needlessly increase its cost have been omitted.

“Honor Bilt” Specifications for Barn No. 3022

Mow Flooring: The mow joists are covered with tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock. A heavy plank floor laid over the tongued and grooved loft floor is specified for the driveway.

Roof Sheathing: A good grade of 1x4-inch Oregon Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles, 1x6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 7 Red Cedar Wood Shingles laid 4 1/2 inches to the weather. Oriental Slate surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $49.00 extra. For illustration of Asphalt Shingles see page 40.

Doors: Only Clear Cypress, “The Wood Eternal,” is used for the doors. Large double sliding driveway doors, 12 feet 4 inches wide and 12 feet high, with small built-in door for foot entrance are provided for the mow. Two Dutch Doors, 3 feet 9 inches by 7 feet 10 1/2 inches, are also furnished in the basement of the barn. The small door at one end is convenient for many purposes. All the doors come “Ready Made,” ready to hang in place, painted with one coat of linseed oil paint, and are better than doors made on the job by hand carpentry.

Windows: Clear California White Pine sash are liberally provided. The sash, divided into nine lights, are 1 1/4 inches thick, and glazed with clear glass. The opening size is 2 feet 7 inches by 3 feet 5 inches. The window frames are made of practically clear lumber. All frames are shipped carefully handled ready to nail together. Windows are provided for two ends and one side of barn. For full description and illustration of windows, see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze is Douglas Fir, Pacific Coast Hemlock or Cypress, “The Wood Eternal.” All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hangar we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration of hardware see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 30, 32, 34, 36, 38 and 40 feet wide. For information how to select the size of your barn, see page 6.

GET OUR LOW—FREIGHT PAID—“DIRECT TO YOU” PRICE ON YOUR BARN
“Glendale” Modern Bank Barn No. 2063

A HILLY COUNTRYSIDE lends itself very favorably to this type of barn. Built into the side of a hill, it permits easy access to the mow with team and load. If desired, the driveway can be omitted and a gable end hay door substituted. The wood wall studs are 14 feet high, allowing a 12-foot clear opening for the driveway. The mow is large and unobstructed, the construction is simple and the man wishing a strong and sturdy bank barn will find that this barn can be built at a remarkable saving of money, time and labor.

Plans: Complete plans and building details, accurately drawn by experienced barn architects, are furnished with this “HONOR BILT” Barn.

Masonry Work: The basement walls are to be built of concrete, or other masonry material and extend 9 feet above the grade line.

Anchor Bolts: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

Construction: This barn is of a post and girder frame and trussed roof construction. See the illustrations on page 10, which clearly show this type of barn frame. The rafters are spaced 2 feet on center and are supported by plank trusses spaced 14 feet apart. The joists are spaced 23 1/4 inches apart and barns over 24 feet in width have two built-up heavy plank girders running lengthwise through the barn. To obtain maximum strength, all corner posts are built up of three heavy framing members. The ground floor height is 8 feet 6 inches.

Framing Lumber: Nothing but No. 1 Douglas Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber is Already Cut and Fitted. For the size of all studs, joists and other framing members, read the “HONOR BILT” specifications on page 10.

Siding: The outside walls are covered with a dressed and matched double "V" siding of Douglas Fir or Pacific Coast Hemlock or Cypress, “The Wood Eternal.” For illustrations and descriptions of siding grades and patterns, see page 13.

Mow Flooring: The mow joists are covered with a tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock. A heavy plank floor, laid over the tongued and grooved loft floor, is specified for the drive-way.

Roof Sheathing: A good grade of 1 x 4-inch Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles 1 x 6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 7 Red Cedar Wood Shingles laid 4 1/2 inches to the weather. Oriental Slate Surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $44.00 extra. For illustration of Asphalt Shingles see page 40.

Doors: Only Clear Cypress, “The Wood Eternal,” is used for the doors. Large double sliding drive-way doors, 12 feet 4 inches wide and 12 feet high, with small built-in door for foot entrance are provided for the mow. Double sliding doors, 8 feet 2 inches by 5 feet, are also furnished for the basement. The small door at each end is convenient for many purposes. All doors come “Ready Made,” ready to hang, painted with one coat of linseed oil paint. Better than doors made on the job by hand carpentry.

Heavy plank door frames, outside casings and surfaced track plank are also included. For description and illustration of doors, see page 12.

Windows: Clear California White Pine sash are liberally provided. The sash, divided into nine lights, are 1 3/8 inches thick, and glazed with clear glass. The opening size is 2 feet 7 inches by 3 feet 5 inches.

The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together. Windows are spaced 7 feet on center. No windows are included for bank side of barn. Ventilation shields are included. For full description and illustration of windows, see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze is Douglas Fir, Pacific Coast Hemlock, or Cypress, “The Wood Eternal.” All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration of hardware see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 30 feet, 32 feet, 34 feet, 36 feet and 40 feet wide. For information how to select the size of your barn, see page 6.

“Country Gentleman” Modern Barn No. 3007

THERE IS a quiet charm about this “HONOR BILT” braced rafter barn. It represents a most approved type of American Barn architecture and well deserves the name—“The Country Gentleman.” It is designed to meet all modern sanitary requirements and is well lighted by numerous large windows that make it a bright and cheery place to do the chores. For the dairyman, for the horseman, or for the farmer with mixed stock, this barn is equally useful and possesses many carefully studied details that will make it a distinctive addition to any farmstead.

“Honor Bilt” Specifications for Barn No. 3007

Plans: Complete plans and building details, accurately drawn by experienced barn architects, are furnished with this “HONOR BILT” Barn.

Masonry Work: The foundation walls are to be built of concrete blocks or other masonry material and extend 4 feet above the grade line.

Anchor Bolts: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

Construction: This barn is a balloon frame and braced rafter roof construction. See the illustration on page 9, which clearly shows this type of barn frame. All framing timbers are spaced 23/4 inches apart; each set of rafters is individually braced; the sills and top plates are doubled. Barns over 24 feet in width have two built-up heavy plank girders running lengthwise through the barn. To obtain maximum strength, all corner posts are built up of three heavy studs. The ground floor height is 8 feet 6 inches.

Framing Lumber: Nothing but No. 1 Douglas Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber is Already Cut and Fitted. For the size of all studs, joists and other framing members, read the “HONOR BILT” specifications on page 9.

Siding: The outside walls are covered with a dressed and matched drop siding of Douglas Fir, Pacific Coast Hemlock, or Cypress, “The Wood Eternal.” Where weather resisting qualities are wanted, Cypress cannot be excelled. For illustration and description of siding grades and patterns, see page 13.

Mow Flooring: The mow joists are covered with a tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock. This flooring can be driven up tight to prevent the hay dust from settling through on the stock below.

Roof Sheathing: A good grade of 1x4-inch Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles 1x6-inch square edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear $ to 2 Red Cedar Wood Shingles laid 4 1/2 inches apart. For illustration Asphalt Shingles instead of wood shingles, $41.00 extra. For illustration of Asphalt Shingles see page 40.

Doors: Only Clear Cypress, “The Wood Eternal,” is used for doors. Double sliding doors, 8 feet 2 inches by 8 feet, are provided at each end of the barn. The hinged gable bay door is 9 feet 4 inches by 12 feet in size. The small door at the mow level is convenient for many purposes. All the doors come “Ready Made,” ready to hang in place, painted with one coat of linseed oil paint, and are better than doors made on the job by hand carpenters.

Heavy plank door frames, outside casings and surfaced track plank are also included. For description and illustration of doors see page 12.

Windows: Clear California White Pine sash are liberally provided. The sash are divided into nine lights, are 13½ inches thick, and glazed with clear glass. The opening size is 7 feet 7 inches by 5 feet 6 inches. The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together. Windows are spaced 6 feet on center. Ventilation shields are included. For full description and illustration of windows see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards, and frieze is Douglas Fir, Pacific Coast Hemlock, or Cypress, “The Wood Eternal.” All rafter ends and gable boards are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 32 feet, 34 feet, and 36 feet wide. For information how to select the size of your barn see page 6.

“Honor Bilt” Specifications for Barn No. 3024

Planes: Complete plans and building details, accurately drawn by experienced barn architects, are furnished with this “Honor Bilt” Barn.

Masonry Work: The foundation walls are to be built of concrete, or other masonry material, and extend 2 feet above the grade line.

Anchor Bolts: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

Construction: This barn is of a stud and girt side wall and a Gothic roof construction. See the illustration on page 11. Nailing girts 2x6 inches and are spiked to the studs which are spaced 3 feet on center. The joists are spaced 16 1/2 inches apart, the sill and top plates are doubled; all corner posts are built up of three heavy studs and heavy built-up girders run lengthwise through the barn. Simple directions make it easy to build the Gothic roof rafters. The ground floor height is 8 feet 6 inches. Height from sill to eaves is approximately 8 feet.

Framing Lumber: Nothing but No. 1 Douglas Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber and the circular verge and frieze is Already Cut and Fitted. For the size of all studs, joists and other framing members, read the “Honor Bilt” specifications on page 11.

Siding: The outside walls are covered with a dressed and matched double “V” siding of Douglas Fir, Pacific Coast Hemlock or Cypress.

Windows: Clear California White Pine sash are liberally provided. The sash are divided into four lights, are 1 1/2 inches thick, and glazed with clear glass. The opening size is 1 foot 10 inches by 2 feet 9 inches. The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together. Windows are spaced 6 feet on center. Ventilation shields are included. For full description and illustration of windows see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze is Douglas Fir, Pacific Coast Hemlock, or Cypress, “The Wood Eternal.” All rafter ends and gable cut-outs are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors slide on Roll-Rite Hangers, the highest grade hanger we sell. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 24 feet, 28 feet, 32 feet, 36 feet, 34 feet and 36 feet wide. For information how to select the size of your barn, see page 6.

“Stockdale” Honor Bilt Modern Barn No. 5299

HERE is a good serviceable barn that is strongly built throughout. The braced rafter roof makes it easy to build and the vertical siding gives the building a very pleasing appearance. This barn can be arranged on the inside so the animals face toward a feed alley in the center. Feeding can be done with the least amount of labor. This high grade, well designed barn combines quality and convenience, as well as economy. If you are looking for the greatest value your money can buy, you will find exactly what you want when you select this modern barn.

“Honor Bilt” Specifications for Barn No. 5299

Plans: Complete plans and building details accurately drawn by experienced barn architects are furnished with every “Honor Bilt” Barn.

Masonry Work: The foundation walls are to be built of concrete or other masonry material and extend 2 feet above the grade line.

Anchor Bolts: Heavy bolts and washers for anchoring the barn sill to foundation are liberally provided.

Construction: This barn has a braced rafter roof. The illustration on page 9 shows this type of roof construction. The side walls are constructed with 2x6-inch studs and nailing girts, which are spiked to the studs. The side wall posts and intermediate studs run from sill to top of wall plate; the rafters and joists are spaced 22½ inches apart. The sills and top plates are doubled and all corner posts are built up of three heavy studs. The ground floor height is 8 feet 6 inches.

Framing Lumber: Nothing but No. 1 Douglas Fir or Pacific Coast Hemlock is specified. Every stick of framing lumber is Already Cut and Fitted. For the size of rafters, joists and other framing members, read the “Honor Bilt” specifications on page 9.

Siding: The outside walls are covered with a dressed and matched double “V” siding of Douglas Fir, Pacific Coast Hemlock or Cypress, “The Wood Eternal,” put on vertically. Where weather resisting qualities are wanted, Cypress cannot be excelled. For illustrations and descriptions of siding grades and patterns see page 13.

Mow Flooring: The mow joists are covered with a tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock. This flooring can be driven up tight to prevent the hay dust from sifting through on the stock below.

Roof Sheathing: A good grade of 1x4-inch Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt Shingles, a 2x6-inch square edge boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 2 Red Cedar Wood Shingles laid 4½ inches to the weather. Oriental Slate Surfaced 4-in-1 Asphalt Shingles instead of wood shingles, $44.00 extra. For illustration of Asphalt Shingles see page 40.

Doors: Only Clear Cypress, “The Wood Eternal,” is used for the doors. Three hinged Dutch doors 3 feet 9 inches by 7 feet 10½ inches high are furnished at each end of the barn. One small door at the mow level and one large hinged gable hay door, is included. All the doors come “Ready Made,” ready to hang into place, painted with one coat of linseed oil paint, and are better than doors made on the job by hand carpentry. Heavy plank door frames, outside casings and surfaced track plank are also included. For description and illustration of doors see page 12.

Windows: Clear California White Pine sash are liberally provided. The sash are divided into four lights, are 1½ inches thick, and glazed with clear glass. The opening size is 1 foot 10 inches by 2 feet 9 inches. The window frames are made of practically clear lumber. All frames are shipped carefully bundled ready to nail together. Windows are spaced 6 feet on center. For full description and illustration of windows see page 12.

Exterior Trim: All outside finish, such as corner boards, outside casings, verge boards and frieze is Douglas Fir, Pacific Coast Hemlock or Cypress, “The Wood Eternal.” All rafter ends and gable lookouts are of dressed lumber.

Paint: Best quality house paint, enough for two outside coats, is furnished. For color combinations see Paint Catalog.

Hardware: The ground floor doors swing on heavy steel “T” hinges. Latches, hinges, guide rollers, bolts and screws are also included. For description and illustration see page 46.

Nails: Enough nails and spikes of all sizes and kinds are guaranteed.

Sizes: We can furnish this barn 30 feet, 32 feet, 34 feet and 36 feet wide. For information how to select the size of your barn see page 6.

“Bloomfield” Barn No. 3008

A “Bloomfield” Barn can be found in nearly every section of the country. It is low in price and strongly constructed.

This barn is designed on a 2-foot concrete or masonry foundation. The ceiling is 8 feet 6 inches high. See small illustration for construction.

All framing lumber is of No. 1 Douglas Fir or Pacific Coast Hemlock, already cut and fitted.

The outside walls are sided with drop siding of Douglas Fir, Pacific Coast Hemlock or Cypress. The Wood Eternal. No. 1 Oregon Fir or Pacific Coast Hemlock framing lumber secures a very strong and rigid barn frame and outside walls that will last a lifetime.

The mow flooring is tongued and grooved No. 1 Douglas Fir or Pacific Coast Hemlock. This flooring is superior to plain boards or shiplap and can be driven up tight to prevent the hay dust from siftmg through on the stack below.

Roof sheathing: A good grade of 1x4-inch Douglas Fir or Pacific Coast Hemlock roof boards spaced 2 inches apart is furnished. For Asphalt shingles 16-inch square-edged boards laid close together are furnished.

Shingles: Our price includes Extra Clear 5 to 2 Red Cedar Wood Shingles laid 45 inches to the weather. Oriental Shingles are furnished. For Asphalt Shingles instead of wood shingles, $34.00 extra. For illustration of Asphalt Shingles, see page 40.

Doors are made of Clear Cypress and are “ready made.” Four Dutch doors and one gable hay door are furnished.

Heavy door frames are provided. (See page 12.)

Frames: Barn sash, opening size 1 foot 1 inch by 5 feet 6 inches by 2 feet 9 inches, are furnished. (See page 12.)

The window frames are shipped carefully bundled ready to assemble. No sawing is required. Windows are spaced 6 feet 7 inches apart.

Hardware, such as latches, bolts, screws, nails, etc., is included in the price; also sufficient paint for two outside coats, and colored paint for the trim. For color combinations see Paint Catalog.

Sizes: We can furnish this barn 20 feet, 24 feet, 26 feet, 30 feet, and 32 feet wide. For information how to select the size of your barn, see page 6.

“HONOR BILT” BARN

Size, 32x38 Feet

Already Cut and Fitted.

Prices on any length quoted on request.

“Madison” Barn No. 2067

This barn is designed to meet the requirements of an inexpensive modern dairy barn or a general purpose barn. As a sheep barn it is very practical. It may be used as an independent unit or built onto an old barn as an annex. This solves the problem of a modern sanitary addition at the least expense. Only good quality of material is furnished for this barn.

All framing lumber is of No. 1 Douglas Fir or Pacific Coast Hemlock, already cut and fitted.

The outside walls are covered with drop siding of No. 1 Douglas Fir, Pacific Coast Hemlock or Cypress. “The Wood Eternal.” This combination secures a very strong frame and outside walls that will withstand the weather for a lifetime.

To make the roof good and strong, we furnish light-fitting tongued and grooved sheathing boards to be laid on the rafters. Special sheathing is furnished 20 gauge for high wind areas. Roll Roofing. Fire-Proof Roofing is guaranteed by us for seventy years. It resembles painted shingles.

Two pairs of sliding doors are provided, one pair for each end. They are made of Clear Cypress, “The Wood Eternal,” and slide on Roll-Rite Hangers, the highest grade hardwoods we handle. These doors are “ready made”—ready to hang in place—and are superior to doors produced by hand carpentry. Heavy door frames are furnished.

Large nine-light windows, 16 inches thick, opening size 2 feet 7 inches by 3 feet 5 inches, provide plenty of light and air. Windows are equipped with ventilation shields. A quick change of air can be made by lifting the windows back into the shields. The practical construction of the shields protects your stock from direct drafts.

The window frames are shipped carefully bundled ready to assemble. No sawing is required. Windows are spaced 6 feet on centers on both sides of the barn. (See page 12.)

Hardware, such as latches, bolts, screws, nails, etc., is included. For description and illustration see page 46. Also sufficient paint for two outside coats, oxide red for the body and white for the trim. For color combinations see Paint Catalog.

Sizes: We can furnish this barn 30 feet, 32 feet, 34 feet and 36 feet wide. For information how to select the size of your barn, see page 6.

Modern Corn Crib and Granary No. 2084
Already Cut and Fitted

This combination corn crib and granary will prove a real labor saver on your farm. An inside cup or portable elevator can be used to advantage. Corn and small grain can then be handled without shoveling. A shelling trench through both cribs is provided. The flooring of overhead bins is hopped and fitted with grain spouts and shut-offs. The grain can be spouted directly into wagon below.

Here is a strong and durable crib and granary, designed to carry maximum loads. The bins are estimated for a safe load of over 75 pounds per bushel capacity and the side walls are rigidly braced to stand all strains. The building as illustrated is 28 feet wide. The corn cribs are 8 feet wide and the driveway 12 feet wide and 12 feet high permits the safe dumping of wagon equipped with bat boards.

All framing lumber is Douglas Fir or Pacific Coast Hemlock, already cut and fitted.

Outside walls are covered with Douglas Fir or Pacific Coast Hemlock, bevel cribbing and drop siding.

The bin floor and bin partitions are covered with tongued and grooved No. 1 Yellow Pine flooring. This is far superior to plain boards or shiplap and will not allow the small grain to sift through.

Tight fitting tongued and grooved roof sheathing is furnished. Over this Fire- Chief Shingle Roll Roofing is laid. This roofing is guaranteed for 17 years. It resembles painted shingles.

The big driveway doors at both ends of the building are "ready made" of Cypress. "The Wood Eternal." They slide on Roll-Rite Hangers, the best hangers we handle. A small door for personal access is built into the larger door. (See page 12.) Crib doors are to be built of cribbing on the job. The necessary material is included.

Two windows in the cupola and a window in each gable provide light for the bin. Hardware, such as latches, bolts, screws and nails, etc., is included; also sufficient paint for two outside coats; oxide red for the body and white for the trim. For color combinations see Paint Catalog.

Modern Corn Crib and Granary No. 2081 Already Cut and Fitted

Every successful farmer knows that it is profitable to feed the grain he produces to his live stock or hold it in storage until the grain market is favorable. With this fact in mind it is easy to see that a good, serviceable corn crib and granary is one of the most valuable buildings on the farm.

Here is a strongly built, modern corn crib and granary, priced very low. Our good quality materials and substantial construction assure lasting service and complete satisfaction.

Construction

FRAMING: Studs, double at all corners; sills, 2x6 inches; top plates are doubled; rafters, 2x4 inches, spaced 24 inches on center; wall studs, 2x6 inches, spaced 24 inches on center. Framing Lumber Already Cut and Fitted.

SIDING, CRIBBING AND ROOF SHEATHING: The outside walls are covered with a medium grade of Douglas Fir or Pacific Coast Hemlock drop siding and bevel cribbing. A good quality of tongued and grooved roof sheathing is furnished.

ROOFING: Fir-Cheif Shingle Roll Roofing is specified. This heavy, strong, fire resisting roofing is guaranteed by us for seventeen years. It is surfaced with a red or green crushed slate and resembles painted shingles.

CAPACITY: Size, 26x30 feet will hold 1,930 bushels of small grain on one side and 980 bushels of ear corn on the opposite side. Additional unit, 26x6 feet, will hold 385 bushels of small grain and 196 bushels of ear corn.

Large Double Sliding Driveway Doors, one for each end, including hardware, $86.00 extra.

Prices include all following materials: Hardware, nails, bolts, complete plans, framing lumber, siding, finish lumber, roof sheathing, roofing, factory made doors and windows and two coats of paint. Quantities guaranteed sufficient. Masonry materials and equipment not included.

Furnished Only 24 Feet Wide and in Unit Lengths of 12 Feet

All the framing lumber is “Already Cut” and Fitted. No. 1 Douglas Fir or Pacific Coast Hemlock framing lumber assures a strong and rigid frame.

The outside walls are covered with a dressed and matched double “V” siding of Cypress, “The Wood Eternal.” To make the roof good and strong we furnish tight fitting tongued and grooved sheathing boards to be laid on the rafters. On the sheathing boards is laid Fire-Chief Shingle Roll Roofing. Fire-Chief Roofing is guaranteed by us for seventeen years. It resembles painted shingles. Asphalt shingles or heavy 5 or 6 Red Cedar shingles furnished if desired.

Doors are made of Clear Cypress, “The Wood Eternal.” They are 10 feet high and 12 feet wide, built in two sections, and slide on Standard Barn Door Hangers and roller tracks. All doors are “ready made”—ready to hang in place, and are superior to doors produced by hand carpentry.

Windows are conveniently located. Hardware, such as latches, bolts, screws, nails, etc., is included in the price, also sufficient paint for two coats, oxide red for the body and white for the trim. For color combinations see Paint Catalog.

Modern Poultry House No. 5306

"Already Cut" and Fitted

The most important things to consider in selecting a poultry house are: Proper ventilation, sunlight, sanitation, convenience, economy in construction and good appearance. All of these necessary features have been taken into account in designing this modern poultry house.

Construction: All studs and rafters, 2 x 4 inches, No. 1 Douglas Fir or Pacific Coast Hemlock, spaced 24 inches on center. Studs doubled at all corners and door openings. Framing lumber is "Already Cut" and Fitted.

Siding and Roof Sheathing: The outside walls are covered with medium grade Douglas Fir or Pacific Coast Hemlock drop siding. A good quality Douglas Fir or Pacific Coast Hemlock tongued and grooved roof sheathing is furnished.

Windows: The upper windows admit sunlight directly on the roosts. The large six-light windows let in sunlight on the floor, keeping it sanitary and dry.

Ventilation: The six-light sash are provided with ventilation shields. The sash are held in position by two spring bolts and arranged to drop back against the shield, deflecting the air towards the roof. Two of the upper sash can be opened and closed by cord and pulley, operated below. The louvre ventilators between the six-light windows come ready made. This feature, and the ventilating shields and upper windows allow proper ventilation during all seasons of the year. Free from dampness and direct drafts.

Roosts and Nests: Material for nests and roosts is furnished. Our plans show how they are built. The roosts are made in sections. They are hinged to the outside wall studs and can be raised and hooked up out of the way to make cleaning of dropping board easy.

Roofing: Oriental Slate Surfaced Roofing is specified. This heavy, strong, fire resisting roofing is guaranteed seventeen years.

Capacity: Poultry house size, 20 x 22 feet, will house 125 birds. Each additional eight-foot unit will house 42 birds.

GET OUR LOW—FREIGHT PAID—"DIRECT TO YOU" PRICE ON YOUR POULTRY HOUSE

Modern Multiple-Unit Poultry House No. 2078

"Already Cut" and Fitted

This Modern Multiple-Unit Poultry House is the result of a careful study made by the New Jersey Agricultural Experiment Station. It is designed for the poultry man who wishes a good winter egg yield.

A poultry house 20 feet wide and 20 feet long, of the shed roof type, is an economical size and is suitable for all climates.

This poultry house is strongly built throughout. All studs and rafters, 2 x 4 inches, No. 1 Douglas Fir or Pacific Coast Hemlock and Fitted.

The outside walls are covered with medium grade Douglas Fir or Pacific Coast Hemlock drop siding. A good quality, tongued and grooved roof sheathing is furnished.

Material for nests and roosts is furnished. The roosts are made in sections. They are hinged to the outside wall studs and can be raised and hooked up out of the way to make cleaning of the dropping board easy.

Oriental Slate Surfaced Roofing is specified. This heavy, strong, fire resisting roofing is guaranteed to wear for 17 years.

GET OUR LOW—FREIGHT PAID—"DIRECT TO YOU" PRICE ON YOUR POULTRY HOUSE
Modern Poultry House No. 5304
"Already Cut" and Fitted

Here is everything one expects in a modern poultry house. It is constructed of good material, planned so that every foot of lumber is used to the best advantage. This poultry house is substantially built, and the price exceedingly low, considering the quality of material and workmanship throughout.

Construction: All studs and rafters, 2x4 inches, No. 1 Douglas Fir or Pacific Coast Hemlock, spaced 24 inches on center. Studs doubled at all corners. Framing lumber already cut and fitted.

Siding and Roof Sheathing: The outside walls are covered with a medium grade Douglas Fir or Pacific Coast Hemlock drop siding. A good quality tongued and grooved roof sheathing is furnished.

Windows: The sash are divided into six lights, size, 8x12 inches. Ventilation shields for each sash are furnished. The louvre ventilating frames between the six light windows come ready made.

Roosts and Nests: Material for nests and roosts is furnished. Our plans show how easily they are built. The roosts are made in sections. They are hinged to the outside wall studs and can be raised and hooked up out of the way to make cleaning of dropping board easy.

Roofing: Oriental Slate Surfaced Roofing is specified. This heavy, strong, fire resisting brand of roofing is guaranteed seventeen years.

Capacity: Poultry house, size 18x22 feet, will house 110 birds. Each additional eight-foot unit will house 40 birds.

At the price quoted, we will furnish all the material to build this poultry house, consisting of Lumber, Hardware, Windows, Frames, Two Coats of Paint, Nails, Roofing, Factory Made Door and Complete Working Plans. For building 48 feet or more in length, one door at each end is furnished. Price does not include masonry material.

Early chicks demand warmth and good care. A brooder house therefore, should be warmly built and mounted on skids so it can be moved near the farm house for convenience of the caretaker. After the chicks are older the brooder house may be moved to any part of the farm. This makes it possible for the chicks to be handled on new, clean, disease-free ground every year.

This low priced brooder house is constructed of good substantial material. It is 8 feet high at the front, 5½ feet high at the rear; all framing lumber already cut and fitted; walls covered with drop siding, tongued and grooved roof sheathing, covered with Best-of-all Roofing, guaranteed 14 years; double floor with building paper between subfloor and top dressed and matched flooring. All necessary hardware, nails and painting material furnished.

The large windows and louvre ventilating frame provide plenty of sunlight and fresh air circulation all the time, which is necessary if the chicks are to develop properly.
Columbia Silos, $110.00 and Up

Furnished in full length clear for staves.

All of our staves are worked from 2-inch stock planed on both sides, edges worked with tongue and groove.

Do not let our low prices bring any question to your mind concerning the quality of our Silos. We never sacrifice quality for price.

DOORS AND FRAMES—Our door frame is one of the strongest on the market, made of the same quality of material as our staves. The cross braces are made of 3-inch material, bolted to the uprights. The frame is further reinforced by a 5 x 1 1/2-inch bar of steel, which gives great strength to the door frame. The door is so arranged that the inside is smooth, allowing the silage to settle freely, as it should.

OUR SILOS ARE TIGHT—The doors are interchangeable and are drawn to place by means of a heavy tail nut and bolt on each side which clamps a heavy piece of steel against the outside of the frame.

FELT GASKETS are provided to be tacked on the doors.

HOOPS AND LUGS—Hoops are made of 5/8-inch steel in three or four sections for each loop, depending on the diameter of the silo, and have standard cut throats extending 7 inches from each end, which gives 3 feet and 6 inches draw on each hoop. Strong malleable iron lugs and clean well fitted nuts join the ends of the hoops.

SAVE ON FREIGHT—If a few men club together, ordering four or five silos, the freight will be reduced considerably by shipping in Car Loads (approximately 300 silos). Send us the names of your neighbors who are interested.

If you are unable to secure a sufficient number of neighbors to join you in ordering a carload, send us your own order anyway. Send it early, specifying the latest shipping date that will be convenient to you, and we may be able to include your silo with others coming near to your station.

### Felt Gaskets for Any Size Silo

Be sure to tell us the name and size of your silo and we will send you the proper quantity of felt gaskets ready to tack on. Do not delay ordering these until too late, as doors that are not tight cause the silage to decay.

**56M1250—Felt Gaskets.**

For silos 24 feet or less in height...

For silos 24 to 30 feet high...

The above prices include a sufficient quantity for a complete silo of size given, shipping weight of any of above gaskets, each, 1 pound.

### Ventilators for Barns, Stables and Other Buildings, $9.90 and Up

Our Majestic Ventilators are scientifically designed and constructed. They have been planned after the best and most approved ideas.

The size of the ventilator required is governed by the number of cattle in the building. If you have more than twenty cattle under one roof you should have two or more ventilators of size according to the number of cattle as shown below.

Each ventilator has a continuous draft arrangement to draw out the foul air and replace it with fresh air.

Any one of these ventilators will go a long way in making your outbuilding attractive, but its main service consists in keeping the building perfectly ventilated under all weather conditions. Leading agricultural authorities agree that ventilation is absolutely necessary in order to get the best results from stock of any kind. Animals will thrive better in a building continually supplied with pure fresh air. Considering the low price and the high quality of our ventilators, no farmer can afford to be without one.

Extra heavy 22, 24 and 26-gauge galvanized steel is used in the manufacture of our Majestic Ventilators, according to size. A thinner than 26-gauge galvanized steel is permitted, and this is only used in the smaller sizes and in parts of larger ones where heavier gauge is not required.

Each ventilator is furnished with four stay rods which hold it securely in place on the roof. A wire rope is provided to keep them from blowing out. When properly secured to the roof, our ventilators, owing to their weight and scientific attachment, will resist unusually severe storms.

W L S World's Largest Store

P.051
A 400 lb. Separator for $39.50

30 Days' Farm Trial and Satisfaction Guaranteed

Lowest Prices

Two Surprising Bargains

A high quality, close skimming cream separator with a capacity of 400 pounds per hour at only $39.25. A big, fast separator guaranteed 600 pounds per hour capacity separator for $51.75. These prices are for shipment direct from our factory at Buffalo, N. Y., and we ship from a warehouse near you at slightly higher prices, insuring quick delivery and small freight charges.

These Standard Economy King Cream Separators have all our latest improvements, including sanitary dice bowl that skims warm or cold milk to perfection, perfect oil splash lubricating system, no splash supply tank, handy dice washer, crank speed timer and every convenience.

Although these Standard Economy King Cream Separators are of somewhat lighter construction than our DeLuxe Economy King Line listed at the right and below, they will give many years of splendid service, with ordinary care. Very easy to run, to clean and to care for. Every one sent on thirty days' trial, and we guarantee perfect satisfaction.

23M5224 ½—Standard Economy King Cream Separator No. 24. Skims 400 pounds or about 90 quarts an hour. Adapted for a dairy of from two to six or seven cows. Shipping weight, 125 lbs.

Price if Shipped From

Buffalo, N. Y. $39.25
Chicago, Ill., or Evanston, Ind. $39.90
Kansas City, Mo., or Minneapolis, Minn. $40.90
Denver, Colo. $42.65

23M2226—Standard Economy King Cream Separator No. 18. Skims 600 pounds or about 200 quarts an hour. A good size for any dairy of from three to five or fifteen cows. Shipping weight, 150 lbs.

Price if Shipped From

Buffalo, N. Y. $51.75
Chicago, Ill., or Evanston, Ind. $52.50
Kansas City, Mo., or Minneapolis, Minn. $53.50
Denver, Colo. $55.95

Table Sizes for Homes and Small Dairies

23M 190½—De Luxe Economy King Cream Separator No. 18, without stand. Skims 135 pounds or about 45 quarts of milk an hour. For use in households or on small farms where only one or two cows are to be milked and the quantity to be skimmed is always small. Shipping weight, 90 lbs.

Price if Shipped From

Buffalo, N. Y. $29.50
Chicago, Ill., or Evanston, Ind. $29.90
Kansas City, Mo., or Minneapolis, Minn. $30.40

23M 191½—De Luxe Economy King Cream Separator No. 11 without stand. Skims 200 pounds or about 60 quarts an hour. For home dairies of from three to five cows. Ships in any size, as it ships so much more quickly than the smaller size. Also adapted for small milk dealers, hotels, summer camps, etc. Shipping weight, 76 lbs.

Price if Shipped From

Buffalo, N. Y. $33.35
Chicago, Ill., or Evanston, Ind., or Kansas City, Mo., or Minneapolis, Minn., or Denver, Colo. $33.75

Bench shown in picture not included.

Our DeLuxe Economy King Line

We offer the genuine DeLuxe Economy King, one of the world's best and biggest selling cream separators, at money saving prices all year around. Big savings on every size. Table sizes now only $28.50 and $33.35. Regular dairy sizes from $49.50 up. These prices are for shipment from the factory at Buffalo, N. Y., and we also ship from other points at slightly higher prices.

Compare prices and match the big line of guaranteed separators listed below, capability for capacity, and weight, for weight, with similar machines offered by agents and local dealers. Don't be surprised if you find our prices far below the prices asked by others for even lighter weight and inferior machines. We aim to make our prices so low that you simply can't afford to buy elsewhere.

QUALITY ABSOLUTELY GUARANTEED. Every cream separator we offer is built by our own engineers. We also sell both Standard and DeLuxe and are the largest and finest in the world. These separators are made of the best material that money can buy. They are built by skilled mechanics, aided by the most costly and accurate machinery, and we positively guarantee them to give you perfect satisfaction.

In addition to the qualities of skimming, sanitary features, scientific design and substantial long-time construction, they excel. Valuable and exclusive patented features include oil splash lubrication—every bearing flooded with oil while running, reducing wear and friction to almost nothing. Separable spindle, sanitary low disc skimming bowl. Grate speed timer on all dairy separators. Oiling indicators on all sizes. Special wide range cream regulation—any cream from heaviest to lightest easily obtained. Instant bowl seating device and numerous other advantages.

Our signed guarantee goes with every one and protects you against defects in material and workmanship for as long as you use it.

Sent anywhere on thirty days' trial, guaranteed to please you or your money returned.

23M 192½—DeLuxe Economy King No. 12 with stand. Skims 250 pounds or about 100 quarts an hour. Best for a small herd of two to four cows which you do not expect to enlarge later. Shipping weight, 163 lbs.

Price if Shipped From

Buffalo, N. Y. $40.80
Chicago, Ill., or Evanston, Ind. $41.50
Kansas City, Mo., or Minneapolis, Minn. $42.50
Denver, Colo. $44.60

23M 194½—DeLuxe Economy King No. 14 with stand. Skims 375 pounds or about 150 quarts of milk an hour. Adapted for a herd of from two to five or six cows. Shipping weight, 175 lbs.

Price if Shipped From

Buffalo, N. Y. $51.15
Chicago, Ill., or Evanston, Ind. $51.90
Kansas City, Mo., or Minneapolis, Minn. $52.90
Denver, Colo. $55.20

23M 195½—De Luxe Economy King Cream Separator No. 16. Skims 600 pounds or about 200 quarts of milk an hour. This is our most popular size. Skims at the rate of a milk pail full every two minutes and does a big skimming in short order. Adapted for any dairy of from three to twelve or fifteen cows. Shipping weight, 225 lbs.

Price if Shipped From

Buffalo, N. Y. $58.95
Chicago, Ill., or Evanston, Ind. $59.85
Kansas City, Mo., or Minneapolis, Minn. $60.85
Denver, Colo. $63.95

23M 196½—De Luxe Economy King Cream Separator No. 18. Skims 800 pounds or about 300 quarts of milk an hour. This is the best size for herds of from ten to twelve to fifty cows or more. Easily handles the extra large milk flow when the cows are fresh or on spring pasture. Well adapted for use with power, if desired, because of its heavy frame and battery and substantial construction throughout. Shipped on thirty days' trial. Shipping weight, 255 lbs.

Price if Shipped From

Buffalo, N. Y. $71.85
Chicago, Ill., or Evanston, Ind. $72.75
Kansas City, Mo., or Minneapolis, Minn. $73.75
Denver, Colo. $77.35

Mail your order to our nearest store, enclosing the price of the size cream separator you select for shipment from our nearest warehouse. By shipping from a nearby warehouse we insure prompt delivery and very moderate freight charges.

Easy Monthly Payments

Economy King Cream Separators on monthly payment terms at slightly higher prices. If interested, write for our easy payment proposition and prices on Economy King Cream Separators.

The Sayings of
Benjamin Franklin

The use of money is all the advantage there is in having money.

* * *

At the workingman's house hunger looks in, but dares not enter.

* * *

Early to bed and early to rise
Makes a man healthy, wealthy and wise.

* * *

A word to the wise is enough.

* * *

Employ thy time well, if thou meanest to gain leisure.

* * *

The sleeping fox catches no poultry.

* * *

Then plough deep while sluggards sleep,
And you shall have corn to sell and to keep.

* * *

God helps them that help themselves.

* * *

Little strokes fell great oaks.

* * *

Lost time is never found again.

* * *

When the well's dry, they know the worth of water.

* * *

Learning is to the studious, and Riches to the careful.

* * *

If you would know the value of money, go and try to borrow some.

* * *

A small leak will sink a great ship.

* * *

Remember, that time is money.

* * *

Diligence is the mother of good luck.

We Guarantee a Saving

Eleven million customers, about one tenth of all the people living in the United States, buy from our stores. They give us the greatest buying power in America. They make it possible for us to guarantee them a saving!

There is no surer way of earning money than to save it. And the sensible way to save it is to buy the things you need economically. Thrift is common sense applied to spending.

Our customers call our Big Catalog "The Thrift Book of a Nation." It is the direct means of saving money for eleven million American people. Indirectly, it is a big factor in the prices paid everywhere, for it is the standard by which all values are measured.

We are the World's Largest Store. We became so, and we continue to be so, because we give the world's biggest bargains with fair dealing. The story of our low prices is volume buying and economical distribution. It costs us less to buy and it costs us less to sell, because we buy more and sell more!

We invite you to compare prices and values. Low price alone does not constitute good value. Honest merchandise, honestly described and illustrated and priced to save you money, is the reason for our leadership.
SAVE MONEY! Buy Slate-Surfaced ASPHALT SHINGLES

Oriental Hexo Asphalt Shingles
Beautiful Blended Colors; Also Red or Green Slate Surfaced

A pleasing appearance in design, as illustrated above, that does away with the hard, slate-like effect of other shingles. Hexagonal Design—Applied at Low Cost

Guaranteed 17 Years

Oriental Hexo Shingles are the result of 25 years' manufacturing experience. Permanent and fire resisting, they are favored by owners and contractors because of their property taxes, insurance rates, and fire resisting characteristics. These are stiff shingles, so do not curl or warp. Defy all weather conditions, such as wind, rain, sleet, snow. You can rely without removing the old shingles. Each shingle pattern is 11 inches wide and 36 inches high when laid.

Oriental Asphalt Slate Surfaced Strip Shingles
4-In-1 Style—Easily Laid at Low Cost
Oriental Asphalt Strip Shingles, the 4-In-1 Pattern, look like individual shingles. The high standard of quality represents one-quarter century of roofing manufacture.

Our Strio Shingles are rigid, lasting, beautiful, fire resisting and economical. Shall not warp, curl or blow in the wind. Ultimate will not affect them. You can choose a new house, or roof it right over it. The old wood shingles without taking them off. It is in effect, having a serving felt. Imported asphalt and crushed natural color slate. House covered with Oriental Asphalt Shingles, later better, because it is blends with wood shingles. Laid with less expense than wood shingles and last longer. Some finished 100 inches wide or 14 inches wide.

SUPER INDIVIDUAL ASPHALT SLATE SURFACED SHINGLES

GUARANTEED 17 YEARS

Oriental Slate Surfaced
Blended, green, blue-black and red. “Blended” is a pleasing combination of green, red and tan. If you choose “blended” you will get a very beautiful roof in a pleasing color scheme. Or if you prefer a color scheme of your own, you can combine any two or all three of the solid colors, green, blue-black or red, according to your taste. Whatever your choice of color you will have a beautiful, fire-resistant slate roof.

Standard Individual
Oriental Shingles
Furnished 812½ inches, to be laid 4 inches to the weather. Genuine imported asphalt and red or green slate surface. Listed by Underwriters Laboratories, which is established and organized by Fire Underwriters. Not illustrated.

Oriental Hexo
Strip Shingles

It is yours for the asking; send postpaid.

SEARS, ROEBUCK AND CO.

W. L. S World's Largest Store
Peerless Litter Carrier

Why continue to haul manure out of your barn with a hand breaking wheelbarrow when you can do it so much easier with the Peerless Litter Carrier? Can be furnished for either steel rod or 1-beam track. Quick lift, self lowering, automatic clutch and brake.

BUCKET—Length, 42 inches; width, 24 inches; depth, 6 inches. Body is one-piece 18-gage galvanized steel; ends, 16-gage; reinforced all around with steel angles. Heavy 2 inch steel channel ball, adjustable for height.

TRACK WHEELS—Malleable, with steel roller bearings. Shipped from factory near CHICAGO, ILL. 3281246—Weight, 215 pounds $35.50

For other styles of Litter Carriers, Track and Attachments, send for our Dairy Barn Equipment Catalog. See opposite page.

Peerless Detachable Water Bowls

Dairymen cannot make a better investment for increased milk production than by installing Peerless Water Bowls. As seven-eighths of milk is water, an abundance of clean fresh water at all times is very essential.

Peerless Water Bowls are automatic in action. Require no attention except occasional cleaning. Attach to either steel or wood posts.

A storage tank, elevated a few feet, will provide all the pressure necessary. The valve consists of a rubber fuller ball, closing against a brass seat, and held in place by a brass spring. The water can be piped from either above or below. Our Dairy Barn Equipment Catalog gives instructions and specifications for piping and installing. Quickly detached for cleaning by removing one bolt, which locks the bowl securely in place. Bowls are made of cast iron and are 10 inches in diameter and 41/2 inches deep, with rolled edges. Shipped from our PHILADELPHIA store.

7282204—Water Bowl, for Steel Stalls Weight, 12 pounds $2.50

7282241—Water Bowl, for Wood Stalls, Weight, 12 pounds 2.50

Improved Peerless Steel Stanchion

Holds the cow securely in her place and yet gives her the same comfort she has in the field. Chain hanger and anchor permits flexibility in any direction, avoiding bruised shoulders and other injuries. No heavy wood bars to collect dirt and filth. Heavy steel U-bars, lined with smooth hardwood strips. Opens 24 inches wide at top. Adjustable top and bottom for neck space. Cow proof spring latch. No better made stanchion at any price. Shipped from our PHILADELPHIA store.

7282209—Weight, 25 pounds $3.10

Many other styles of Stanchions are shown in our Dairy Barn Equipment Catalog PL676MBF. Send for your copy today.

The Golden Dairy Herd

There's probably no other farm industry which has made as rapid headway in the past few years as that of the dairy business.

Imagine this gigantic industry with an annual production of milk and dairy products which total over two and one-half billion dollars—greater in value than all the gold produced in the United States since 1891.

Along with this rapid advance is the demand for more healthy cows. An urgent need for more sanitary barns and equipment. Something that would make barn work easier and save time.

The World's Largest Store has kept abreast of the times. It offers you the best and latest in sanitary barn equipment. The kind that makes it easier to keep your barns and animals clean, and also comply with any requirements that may be imposed by the authorities. It is economical, long lasting, and carries our guarantee of satisfaction.

It will pay you to buy your dairy barn equipment from us. Investigate today!

Peerless Steel Stalls

Peerless Stalls are simple, strong, practical and contain all the features necessary for cleanliness and comfort to the animal. There is a size for every barn. Built of heavy steel tubing; 1 3/4 inches in diameter and bolted together with heavy malleable clamp fittings. Upright posts stand 5 feet 5 inches high above floor, with 3 inches additional for imbedding in concrete. The stall posts are 1 1/2 inches high and 4 1/2 inches from uprights, and are 42 inches high from floor. Stalls can be furnished 2 feet 6 inches to 4 feet wide, as ordered, allowing plenty of room according to size of animal.

When Ordering Stalls Give Us This Information

Into how many rows will stalls be divided? The desired width of stalls. Will rows join building wall at one or both ends?

Also furnish us with a rough pencil drawing showing the number of stalls in each row, the location and size of any posts that may be in the way of the rows, and the distance between posts from center to center in both directions.

Each stall has two uprights and crosspiece for supporting partition. Price includes top rail, two side uprights, one bent partition, one steel stanchion with anchor, and necessary clamps and bolts. Illustration shows top stalls with partitions and one extra end section. Shipped from factory near CHICAGO, ILL. 3282263—Model A Steel Stall complete with steel stanchion $8.15

Our Dairy Barn Equipment Catalog shows several styles of Stalls, Pens and Mangers. See opposite page.

Buy an "Honor Bilt" Home and you will be proud of it as long as you live. Here is a home built not for a day, not for a year, but for a generation. Each model is designed and planned by a council of experienced architects, which includes a woman. Every "Honor Bilt" home not only must be attractive and beautiful, but must be conveniently arranged for the housewife.

From Our Own Mills Direct to You

Made in our own mills and shipped direct to you. All material must pass our rigid tests. The difficult carpenter work is done at the mills on a large scale by labor-saving machinery at nearly half the cost of hand work. Every piece is ready to put in place without further measuring or cutting. This means a big saving in time, labor costs and also material, since you have no waste pieces.

"Honor Bilt" Homes have stood the test of satisfaction. There are over 42,700 in service. About 30,000, or nearly three-fourths, have been erected by the home-owners themselves, so simple is the erection of a ready cut "Honor Bilt" Home. If you prefer not to do the work yourself, any handy man with a general knowledge of carpentry can do the job for you.

EASY PAYMENTS

Our book of "HONOR BILT" Modern Homes, 398N, explains our successful system of home ownership on the cash or easy payment plan. Write for your free copy of this interesting book.

One Order Brings It All!

No need to shop about in a dozen places. When you purchase a home from us you dispose of the entire transaction in a few minutes. On acceptance of your order we ship at factory prices all the material to build your house complete. No extras. See partial list on opposite page.

Save $500 to $2,000

Letters from "Honor Bilt" Home customers tell of saving from $500.00 to $2,000.00. Such big savings are effected because we operate our own modern lumber mills, millwork and building material factories and sell direct to you. They cover a total area of 125 acres, and represent an investment of ten million dollars.

Our Guarantee

We guarantee every "Honor Bilt" Modern Home to be exactly as represented and to give perfect satisfaction. We guarantee to furnish sufficient material to complete the house you select according to our plans and specifications. We guarantee safe delivery. We guarantee satisfaction or will return your money promptly, including freight charges. This guarantee is backed by our entire organization with a capital of $105,000,000.00.

More Comfortable Home

Modern Homes

Factory to You

For permanence, for lasting satisfaction and for a comfortable home—choose "Honor Bilt," Modern Home. Why pay more when you can get the best at such a big saving in time and money? Our specifications assure you a warm, comfortable home for years to come. All materials are double, with paper-waterproof building paper between the subfloor and the finished floor. The New Air Sealed Wall Construction, exclusive with "Honor Bilt," means extra warmth and comfort. This frame is made of sturdy 2x4-inch studs, 2x6-inch posts, and 2x4-inch rafters. Wherever necessary large rafters and joists are used. We conform to all local building codes.

Best Quality Material

The lumber furnished for "Honor Bilt" homes is bright and new, fine, dry No. 1 framing, clear. Cypress for outside finish, and clear siding. Expert mechanics, modern machinery, and good materials make a modern home possible (as specified) for the best finish—the kind of material that will prove to be a little better than generally used in home construction. Every detail is a quality product.

Easy Payments

If you own a building lot and have some cash, you can buy an "Honor Bilt," Modern Home, including all heating, plumbing and lighting fixtures, at our Easy Monthly Payment Terms, and (in some instances) we will advance part of the cash for labor and such materials as brick, cement, etc. The monthly payments shown do not include our low interest.

Quality Specifications

Specifications for "Honor Bilt" Modern Homes shown on these pages include the following homes:

Lumber

Windows

Porch Material

Exrea Trough

Millwork

Building Paper

Hardware

Paint and Varnish

Doors

Medicine Case

Shingles or Roofing as specified.

We guarantee enough material to finish the house completely. We do not furnish cement, brick and plaster.

Save From $500.00 to $2,000.00

You need our Book of "Honor Bilt," Modern Homes. It will save you $500.00 to $2,000.00, depending upon the size house you build. It illustrates homes for city, suburb and farm. Each home is priced, completely illustrated and described in floor plans shown.

This Free Book of 100 Homes

Our Book of "Modern Homes," $5.00, contains over 100 designs from $588.00 to $4,810.00. It gives you the Architectural design, Easy Payment Plan, and our successful "Honor Bilt" System. A magnificent book! Many pages of beautiful color illustrations of exteriors,owała careful illustrations of furnished interiors and floor plans. Included are Ready-Cut Summer Cottages, designed for woods or seashore, from $179.00 up; also 31 wood and steel garages for $60.00 and up.

Sears, Roebuck and Co.

Sears, Roebuck and Co., 115 Fifth Ave., New York, N. Y., has just 66 days from the day I got the lumber that I was living in my home with a saving of about $300.00 on carpenter labor. I figure about $1,800.00 saved by getting my home Ready-Cut from Sears, Roebuck and Co., with all hardware, nailing and mantelpiece.

Address furnished on request.

1. **CASH WITH ORDER**

*Sears, Roebuck and Co.*

In accordance with your guarantee of satisfaction or money returned, enclosed please find (State Whether Postoffice or Express Money Order, Draft, Check or Letter of Deposit) for $____ for your______ described on page______ of your Book of "Modern Farm Buildings." This order is sent with the understanding that the price includes Lumber, Millwork, Hardware, Nails, Paint and Roofing Material sufficient to complete the barn in a workmanlike manner and according to your complete building plans which are furnished with the material.

*YOUR MONEY, INCLUDING ANY TRANSPORTATION CHARGES YOU PAID, WILL BE IMMEDIATELY REFUNDED IF NOT SATISFACTORY.*

(Signed)__________________________

Color of paint for outside body______________

Color of paint for outside trim______________

2. **PAY FOR THE MATERIAL AS THE BUILDING GOES UP**

If you are building by an arrangement with a bank we will ship the material to you upon receipt of a letter from the bank stating that the amount of our bill has been set aside for us and payments for the material will be remitted to us at certain periods as the work progresses.

3. **PAY AFTER INSPECTING MATERIAL**

If you would like to inspect material before sending us the money you can deposit the payment required with your bank and send us with your order this letter of deposit. This will give you a chance to inspect your material before we get a cent of your money.

**LETTER OF DEPOSIT**

*Sears, Roebuck and Co.* has deposited with us the sum of $____ which has been set aside for you as a special fund, same to be paid to you upon delivery of the building material ordered of you, payments to be made at time material is delivered.

*Sears, Roebuck and Co. hereby agree that the material will be exactly as represented and entirely satisfactory to the depositor. The material is to be inspected upon its receipt and, if satisfactory, accepted by the depositor, who will then notify us to send Sears, Roebuck and Co. the money.*

See Other Side for Easy Payment Plan Offer
4. Easy Payment Plan

If you own well located, productive farm land, free and clear from debt, and have some cash on hand for foundation and labor, you can buy from Sears, Roebuck and Co. an “Honor Bilt” Modern Barn, consisting of Lumber, Millwork, Nails, Paint, Roofing or Shingles, Hardware and Complete Working Plans, on easy payment terms, and in some instances we will advance part of the cash for labor and the masonry material you have to buy which we do not furnish. We allow you five years’ time to pay. Interest, 6 per cent per annum. Your interest becomes less each time you make a payment.

Here is what will be required of you when you order the material on easy payment terms:

1. Show clear title to your farm land.
2. Send us with order 2½ per cent of amount that will be due us for material and any cash we are to furnish. This is the additional charge we make to cover the expense of handling the transaction and compensate us for expenses we do not have in connection with our cash with order business.
3. Make payment of ten (10) per cent of the amount of the credit or loan we grant with six (6) per cent interest per annum on December 1st of each year. After five years the balance then outstanding is due and payable. Payments may be made every three or six months if more convenient. You may pay more than your regular payment whenever you desire or even take up the loan in full any time before it is due.

Easy Payment Plan Information Blank

If you are interested in our Easy Payment Plan please answer the following questions. We will then gladly tell you what our terms will be in your particular case.

How large is your farm? ___________________________ How much did you pay for it? $ ___________________________

Is it free and clear from debt? ___________________________ What is the value per acre? $ ___________________________

How many acres are productive? ___________________________ Income from farm last year? $ ___________________________

Value of each building on the farm? ___________________________

How much will it cost to erect your new barn? $ ___________________________ How much cash have you to put in the deal? $ ___________________________

When do you expect to start building? ___________________________

Which one of our barns do you intend to build? Number of the Barn ______ Size ______ x ______ Price, $ ______

Your Name ___________________________

Postoffice ___________________________ State ___________________________

Rural ______ Box ______ No. ______ Street and No. ______

We also sell our “Honor Bilt” and “Standard Bilt” Houses on Farm Loan Terms as outlined above.

PHILADELPHIA
The Guarantee and the Institution Behind It

We Stand Back of This Guarantee
It Is Your Assurance of Big Saving, Better Service, Greater Satisfaction

CERTIFICATE OF GUARANTEE

WE GUARANTEE your "Honor Bilt" Barn to be exactly as represented in our catalog and to give complete satisfaction. YOU TAKE NO RISK!

We GUARANTEE to furnish enough of all materials, except masonry, to complete your barn according to our plans and specifications. THERE WILL BE NO EXTRA MATERIAL TO BUY.

We GUARANTEE not only the quality of material and workmanship, but complete satisfaction with your barn in actual use. If our simple plans and building specifications are followed, we GUARANTEE that after the shipment has been examined, if the material does not come up to your expectations in every respect, by notifying us in writing it can be shipped back AT OUR EXPENSE and we will promptly RETURN THE ENTIRE PURCHASE PRICE and any freight charges that may have been paid by you.

This guarantee is backed by the entire resources of our whole institution amounting to over one hundred million dollars.

Saved $300.00
Sears, Roebuck and Co.
Gentlemen:
I saved at least $300.00 by buying from you. I am well pleased with all material received and was treated squarely throughout the entire deal.
EDGARD DE MUNCK
(Address on request)

Saved Over $300.00
Sears, Roebuck and Co.
Gentlemen:
If I were to build again I certainly would send to Sears, Roebuck and Co. for the materials. I could not get lumber like that here. The saving I made was between $100.00 and $400.00. I am well pleased with my "Honor Bilt" Barn.
GEO. KRUMMEL
(Address on request)

Well Pleased
Sears, Roebuck and Co.
Gentlemen:
I am well pleased with my new "Honor Bilt" Barn. All the material was very good grade, plenty of it and it all went together perfectly. I made a big saving in time and money.
