

Portland State University's Anthropology Student Association brings you:

Archaeology First Thursdays

Human Settlement of the Puget Sound Lowland at the Late Pleistocene-Holocene Transition as seen from the Bear Creek Site (45KI839)

Presented by

Dr. Robert Kopperl (SWCA), Dr. Amanda Taylor (SWCA), Dr. Kenneth Ames (PSU)

The Bear Creek site in suburban Seattle is the first archaeologically excavated site dating to the Late Pleistocene-Holocene (LPH) transition in Western Washington that has yielded lithic artifacts. The information it provides regarding very early settlement, technology, and land use in the Puget Lowlands is therefore singular at this time. Robert Kopperl and Amanda Taylor will present the results of the 2013 large-scale data recovery excavation and subsequent analyses.

**Thursday, June 4th 4:00pm,
Smith Memorial Student Union 236**

Free & Open to Public
